

Cadence Opportunities Fund Limited

(ASX Code: CDO)

March 2026 Quarterly Webcast

In this quarterly webcast, Karl Siegling first gives an update on the Company's performance, its 7.5c fully franked interim dividend paid, CDO's discount to NTA, the current composition of the portfolio and its top 20 holdings. Karl then discusses in detail two of the fund's investments Predictive Discovery (PDI AU) and Samsung (005930 KS) before closing with an update on the outlook for the rest of the year. Karl then closes by reminding investors of the upcoming Investor Presentations where we will highlight important emerging themes for the future.

Cadence Opportunities Fund Limited

March 2026 Webcast

March Quarter 2026

- During the Quarter, the fund was down 0.2% outperforming the index by 2.5%
- CDO is up 35.9% for the past 9 months, strongly outperforming the index by 34.3%.
- CDO is one of Australia's top-performing investment companies returning 24.5% per annum since its inception 7 years ago.
- The top contributors to performance during this quarter were EQ Resources, Lindian Resources, Samsung Electronics, Guzman Y Gomez, Robex Resources, Endeavour Mining and Megaport.
- The detractors from performance were Turaco Gold, Amplitude Energy, Polymetals Resources, 29 Metals and Capstone Copper.
- The world has changed; we are no longer in a 'buy the dip' world. Many crowded themes have rolled over (technology, retail) and more may follow suit (AI, contractors). Structurally higher interest rates, inflation, high energy prices and currency 'wars' makes this a more dynamic and nuanced investment environment than simply 'buy the dip'.
- During this quarter CDO reduced exposure (moving into cash by selling positions) having 70% net exposure at the end of the quarter. (30% Cash).
- Next week we are doing a Roadshow to explain what we think investing looks like going forward.

- The AI infrastructure buildout continues to create a massive shortage of memory across both traditional markets (PC and mobile) and high bandwidth markets (AI GPUs).
- Samsung announced its 1Q26 results which showed memory prices up 90% quarter on quarter and net profit having increased over 140%.
- Samsung's share price volatility increased significantly through the quarter with the war in Iran and generally elevated market volatility.
- We took the opportunity to sell our Samsung position in May after the share price had increased about 40% from the March quarter end and started to roll over.
- We subsequently added a new smaller position as the share price continued to trend upward with higher volatility.
- Rather than investing in loss making AI businesses we have purchased a cheap profitable chip producer

Outlook

- The investment landscape has fundamentally changed; inflation and interest rates are rising; geopolitical uncertainty; currency wars; and the 'war' for scarce resources continues.
- CPI of 4.2% is above the RBA's target band of 2 – 3% and a longer-term interest rate upcycle commenced in May 2022. We expect this to continue.
- This is at odds with the 'buy the dip' mentality adopted by many in markets; we don't see this strategy being as successful going forward as it has been in the past.
- Many crowded trades (technology / Saas, retail etc.) have fallen significantly without meaningful recovery and remain on expensive valuations for a higher interest rate environment.
- Other sectors such as AI and contractors are also crowded and may soon face the same fate.
- We expect inflation to remain a challenge with persistent budget deficits, lower productivity, and governments going 'insular' reversing previous globalization trends. We see a lot of similarities between the outlook today and that of the 1970s with persistent stagflation.
- Stock selection and application of the Cadence process is pivotal in these times.
- At our upcoming roadshows we will highlight important emerging themes for the future.
