

Noosa Mining Investor Conference

Peppers Noosa Resort

(ASX:D3E) & (OTCQX:DNRGF)

David Casey – Managing Director & CEO
13th November 2025

Disclaimer

This document provides summary information about D3 Energy Limited (ACN 649 276 808) (**D3 Energy** or the **Company**) current as at the date of this presentation. This document has been prepared for information purposes only

This document is not, and should not be considered as, an offer or an invitation to acquire securities in D3 Energy or any other financial products and neither this document nor any of its contents will form the basis of, or act as an inducement to enter into, any contract or commitment. This document is not a prospectus, product disclosure statement or other offering under Australian law or any other law and does not contain all of the information which would be required to be contained in a prospectus, product disclosure statement or other offering under Australian law or any other law.

The contents of this document are confidential. This document is being provided to recipients on the condition that recipients do not reproduce or communicate them or disclose them to, or discuss them with, any other person without the prior written consent of the Company

Neither D3 Energy nor any of its officers, employees, related bodies corporate, affiliates, agents or advisers guarantees or makes any representations or warranties, express or implied, as to, or takes responsibility for, the accuracy or reliability of the information contained in this document. D3 Energy does not represent or warrant that this document is complete or that it contains all material information about D3 Energy or which a prospective investor or purchaser may require in evaluating a possible investment in D3 Energy or acquisition of D3 Energy securities. Nothing contained in this document, nor any information made available to you is, or shall be relied upon as, a promise, representation, warranty or guarantee, whether as to the past, present or the future. D3 Energy has not carried out due diligence investigations in connection with the preparation of this document. You must conduct your own independent investigations and enquiries as you deem fit. The information set out in this document does not constitute or purport to be a recommendation by D3 Energy or its officers, employees, agents or advisers and has been prepared without taking into account the objectives, financial situation or needs of individuals. The information in this document does not constitute financial product advice (nor investment, taxation or legal advice).

To the maximum extent permitted by law, D3 Energy and its related bodies corporate and each of their respective directors, employees, officers, affiliates, agents and advisers expressly disclaim any and all liability (including without limitation for negligence) for representations or warranties or in relation to the accuracy or completeness of the information, statements, opinions or matters, express or implied, contained in, arising out of or derived from, or for omissions from, this document including, without limitation, any historical financial information, any estimates or projections and any other financial information derived therefrom. In particular, this document does not constitute, and shall not be relied upon as, a promise, representation, warranty or guarantee as to the past, present or the future performance of D3 Energy.

This document contains certain forward-looking statements and opinion which are provided as a general guide only and should not be relied on as an indication or guarantee of future performance and involve known and unknown risks, uncertainties and other factors, many of which are outside the control of D3 Energy. Past performance is not necessarily a guide to future performance and no representation or warranty is made as to the likelihood of achievement or reasonableness of any forward-looking statements or other forecast. D3 Energy does not undertake any obligation to update or revise any information or any of any forward-looking statements in this document or any changes in events, conditions or circumstance on which any such forward looking statement is based. You are cautioned not to place undue reliance on forward looking statements as actual outcomes may differ materially from forward looking statements. Any forward-looking statements, opinions and estimates provided in this presentation necessarily involve uncertainties, assumptions, contingencies and other factors, and unknown risks may arise, many of which are outside the control of the Company. Such statements may cause the actual results or performance of the Company to be materially different from any future results or performance expressed or implied by such forward looking statements. Forward looking statements including, without limitation, guidance on future plans, are provided as a general guide only and should not be relied upon as an indication or guarantee of future performance. Such forward looking statements speak only as of the date of this presentation.

The information in this presentation is current as at the date on the cover of the presentation and remains subject to change without notice. In particular the Company disclaims any intent or obligation to update publicly any forward-looking statements, whether as a result of new information, future events or results or otherwise. By attending or receiving this presentation you acknowledge, accept and agree to the matters set out above.

Compliance Statement

The statements and consents, in relation to the estimate of gas Reserve outlined in this presentation, are outlined in the Company's ASX announcement dated 24 July 2025 (**Announcement**). D3 Energy confirms that it is not aware of any new information or data that materially effects the information contained in this Announcement and that all material assumptions and technical parameters underpinning the estimates contained in the Announcement have not materially changed.

The statements and consents, in relation to the estimate of Contingent Resources outlined in this presentation, are outlined in the Sproule independent evaluation report included in the Company's Prospectus dated 5 March 2024 (supplemented by a supplementary prospectus dated 10 April 2024 and a second supplementary prospectus dated 17 April 2024) and lodged with ASX on 9 May 2024 (**Prospectus**). As outlined in the Company's announcement dated 24 July 2025, the estimate of Contingent Resources were varied as part of the Company's maiden Reserve estimate with some Contingent Resource volumes upgraded to Reserves resulting in a decrease in Contingent Resource volumes (**Variation**). Other than this Variation D3 Energy confirms that it is not aware of any new information or data that materially effects the information contained in the Prospectus and that all material assumptions and technical parameters underpinning the estimates contained in the Prospectus have not materially changed.

Who is D3 Energy?

The Company - Corporate Snapshot

(ASX:D3E) & (OTCQX:DNRGF)
(as of 11th Nov 2025)

120.8m Shares on issue	\$0.41.5 Share price (@ 11 Nov 2025)
\$50.1m Market Cap	\$4.1m Cash (30 Sept 2025)

Enterprise Value (EV) \$46.0m

- Listed ASX 13th May 2024
- Listed OTC 5th Nov 2024
- Helium and natural gas (methane) assets in the Free State of South Africa
- Helium, hydrogen and natural gas (methane) assets in South Australia

ASX OTC Markets

Major Shareholders

So, what is Helium
and what's it used for?

Helium – What's it used for?

Helium is a critical resource for the 21st Century

Global Helium supply and demand

The world keeps running out of helium. There is now a race to prepare for the next shortage

1 April 2025

BBC

Callum Bains

Liquid helium is used to cool the superconducting magnets at facilities such as the Large Hadron Collider (Credit: Alamy)

- Current demand growth of around 5-6% and likely to double by 2035
- Total market expected to grow from 6.5BCF to just over 8BCF in 2030

Helium is critical for our hi-tech world...and conservatively 50 to over 100 times more valuable than natural gas

South African Assets

South African Assets – Free State

- Five permit areas totalling 395,890 acres in the Free State South Africa

- A unique geological history 2 billion years in the making has created a truly exceptional opportunity
- The end result is a world class helium and biogenic methane province with **evidence of unrepresented gas regeneration and recharge**
- Independently certified 2C Contingent Resource and 2P Reserve for both helium and methane**
- Adjacent to ASX Listed Renergen which has an operational cryogenic helium and LNG plant (~20km or 12.4miles to west)

Renergen and ASP Isotopes Merger Creates Critical Materials Powerhouse **Discovery/Alert**

BY JOHN ZADEH ON MAY 21, 2025

Excellent results allowed Production Right application to be lodged 12 months AHEAD of schedule and UNDER budget

Map of D3 Energy current acreage and application areas (100% D3 Energy)

There's Unique and then there's...

- The world's largest (300km wide) and oldest meteor impact 2 billion years ago created the Vredefort Crater in the northern Free State, and **concentrated** uranium already prevalent in the magmatic rich rocks in this region into certain impact structures
- Radioactive decay of Uranium creates Alpha particles which become helium in the earth's crust
- **Extensive deep faulting is now acting as a conduit for helium and biogenic methane which is continually generated from these rocks/structures at depth, to the surface, where it can be recovered from shallow very low-cost wells**

Partial remnants of the Vredefort impact crater in the Free State

Helium is ONLY generated by natural radioactive decay of Uranium and Thorium

Exploration Right 315 (ER315)

ER315 – Excellent initial results

- Measured helium concentrations of **4.7% to 6.2%** confirm world class potential – *helium concentrations of less than 1% commercial elsewhere*
- Well's **free flow** gas to surface – negligible pressure, no produced water, no downhole equipment...NO ISSUES!
- **Legacy boreholes (RBD01 & RBD03) have potentially been producing gas since the early 1980's**

Map of D3 Energy current acreage and application areas (100% D3 Energy)

Extensive deep-seated faulting and continual regeneration are the KEY

ER315 – Flow test results

- Excellent flow rates measured in new and legacy gold exploration boreholes
- Peak gas rate for **RBD10** of **310msfcd**
- Measured permeability and interference between wells in all tests indicates very good reservoir quality and connectivity
- **Legacy boreholes that have been flowing for over 40 years have down hole obstructions that are likely to be inhibiting gas flow**

Drink bottle recovered from RBD01 during flow test

Conventional wells show a continual decline due to depletion NOT evident in ER315 where we see the OPPOSITE

ER315 – The Enigma that is a Conundrum that is...

RBD10 Production Testing

- The fact that RBD03 which has been flowing continuously over the last 40 years before being recently shut in exhibits an almost identical retest response to RBD10 drilled last year, supports the notion of a ubiquitous and extensive reservoir and recharge system

The result of re-testing more than 12 months apart is the paradox of **HIGHER NOT LOWER** reservoir pressure and production rates

- Retesting confirms the truly UNIQUE characteristics of this reservoir
- RBD03 & RBD10 measured an incredible 32% & 38% respective increase in flow rate after retesting following a 12-month shut in
- Higher pressure and flow rates can only imply **continual recharge of helium and biogenic methane at depth**

RBD03 Production Testing

ER315 – Maiden Reserve Certification

- Reserves ONLY for Production Right application (PRA) area
- PRA is less than 9% of total area of all permits and reserve area is significantly smaller again
- Does not take into account the Venterburg Fault or any additional faults in between where gas is currently flowing from legacy gold exploration boreholes

Reserve (BCF)	1P	2P	3P
Gross Reserve	7.21	14.43	22.97
Net Methane Reserve	5.45	10.91	17.36
Net Helium Reserve	0.353	0.706	1.124

Contingent Resource (BCF)	1C	2C	3C
Recoverable Gas Resource	329.44	533.02	825.07
Recoverable Methane	285.64	462.16	724.05
Recoverable Helium	13.399	21.637	33.893

Reserves are CONSERVATIVE as they only cover a very small area of ~3% of total acreage under tenure or application

Reserve & Contingent Resource volumes are based on independent evaluations reports of ER315 prepared by Sproule. Refer to Compliance Statement (page 2 of Presentation) for further details

Low cost – high return wells

- High helium concentrations at current gas rates = **high potential well profitability**
- Methane is a valuable commodity in its own right in energy starved South Africa
- Wellhead (no processing) payback periods of months not years!

Bloemskraal 100msfd (4.4% helium) wellhead payback period at various helium & methane prices

In development scenario there is **NO** surface equipment

- No pumps or downhole equipment - no workovers - **NO COST**
- Very low pressures - **LOW COST**
- No surface equipment - **LOW COST**
- Low pressure gathering system and central offtake or processing facility - **LOW COST**

Significantly lower wells costs in a development scenario - one of the lower if not LOWEST cost pure helium plays anywhere

South Australian Assets

Australian Assets – “Conventional” Helium & Hydrogen

Arckaringa Basin – PEL 121 & 122 (5,865 km² / 1,450,000 acres)

Source

- World’s largest Uranium deposit at Olympic Dam “next door”
- Mapped basement faults are ideal for serpentinization and hydrogen production

Reservoir

- Heavitree Sandstone is an Ideal reservoir and reaches over 200m thickness in other time equivalent basins

Seal

- Mapped Tonian evaporite (salt) which is a proven seal is present in PEL121 & PEL122

Only 2 wells have been drilled below salt in analogous Amadeus Basin, and BOTH recovered helium to surface with  also produced at Mt Kitty-1

More than a Trillion Cubic Feet (TCF) of in-place gas potential

PEL121 – Drill Ready Prospect

- Analogous Mt Kitty-1 measured **9% Helium and 11% Hydrogen**
- Previous wells in Arckaringa have **NOT** drilled below salt
- To date **2 prospects and 9 leads** have been identified on available seismic data

Work is ongoing to convert high grade leads into prospects and mature PEL 122

Hydrohelix-1

Hydrohelix - Line 85-XQC

The Hydrohelix (HL) prospect shares many similarities with Mt Kitty:

- 1) They are at a similar structural depth to basement
- 2) They have a similar thickness of evaporites (salt)
- 3) They both appear heavily faulted (HL more so)
- 4) Both have structural closure controlled by faults
- 5) **Hydrohelix is much bigger at 148km²**

Catalysts...

The next 12 months?

- Submission and acceptance of Production Right application (PRA) ✓
- Prospective Resource for PEL 121 - Hydrohelix Prospect
- Granting of Strategic Integrated Project (SIP) status
- Contingent Resource upgrade to incorporate ER386
- Potential JV partner for PEL 121 & 122
- Gas sales offtake agreement for PRA in South Africa
- Potential Reserve upgrade
- Drilling at Hydrohelix Prospect
- Grant of PRA – Q4 2026/Q1 2027
