

Corporate Presentation

February 2026

ASX : FDR

KTJ Fast-Track to First Oil

Highlights

Ownership of Petrojarl I FPSO de-risks the KTJ Project and unlocks strategic and economic benefits¹

50% of development capex (US\$170m) secured for KTJ Project under farmin agreement with TIMOR GAP²

Targeting FID mid-2026 to fast-track development of the Kuda Tasi and Jahal oil fields in Timor-Leste (25 MMbbl Gross 2C³)

Powerful cash flow with initial forecast production rates of 25,000 – 30,000 bopd (facility constrained) and ~10 MMbbl produced in the first 18 months⁴

High impact appraisal and exploration opportunities across Asia Pacific and UK North Sea portfolio

We are targeting a series of high impact catalysts on the KTJ Project in 1H 2026...

- 1** Secure rig for development wells
- 2** Updated production forecasts
- 3** FDP
- 4** Debt funding
- 5** FID & Book 2P Reserves
- 6** Updated 2C Resource estimate on Krill & Squilla
- 7** High grade appraisal & exploration upside opportunities

¹ Refer ASX Announcement of 3 December 2025 for further details.

² Refer ASX Announcement of 25 September 2025 for further details.

³ Refer ASX Announcement 8 October 2025 and Appendices for further details. KTJ combined using probabilistic summation. Contingent resources are derived probabilistically and have been stated on an unrisks basis and have not been associated for the change of development.

⁴ Forecasts are based on KTJ gross 2C contingent resources. Forecasts are dependent on a number of uncertainties, including development risk, scope of the development plan, field performance, partner funding and other financing, regulatory approvals and availability of equipment and materials. Refer to Disclaimers and Cautionary Statement in this presentation.

PSC 19-11 Timor-Leste Overview

PSC 19-11 Resources – KTJ Upgraded

¹ Resources are derived probabilistically and are unrisked. KTJ Project aggregated using probabilistic summation. All other petroleum resources have been aggregated/combined beyond the prospect/field level by arithmetic summation whereby the aggregate low (1C/1U) estimate may be a very conservative estimate and the aggregate high estimate (3C/3U) may be a very optimistic estimate due to the portfolio effects of the arithmetic summation. Refer to Petroleum Resources table in Appendix for full details and disclosures.

² Combined Gross Prospective Resource estimates are low 17 MMbbl, best 69 MMbbl, high 271 MMbbl.

ASX disclosure: The estimated quantities of petroleum that may potentially be recovered by the application of a future development project(s) relate to undiscovered accumulations. These estimates have both an associated risk of discovery and a risk of development. Further exploration appraisal and evaluation is required to determine the existence of a significant quantity of potentially recoverable hydrocarbons.

Powerful reservoir performance

- High quality Laminaria Formation reservoir
- Strong aquifer drive and pressure support
- Light sweet oil - 55-60° API

2C Production Model Forecast¹

- 15 MMbbl forecast oil production in the first 2 years of production
- Ownership of the PJI extends field life increasing ultimate recovery
- Upside from appraisal and exploration success (not shown)

¹ Forecasts are referenced to the Kuda Tasi and Jahal combined gross 2C contingent resources. Forecasts are derived from KTJ geocellular modelling and are also dependent on a number of uncertainties, including development risk, scope of the development plan, field performance, partner funding and other financing, regulatory approvals and availability of equipment and materials. Refer to Disclaimers and Cautionary Statement in this presentation.

Fast-Track Development – Gathering Momentum

2024/25 | Subsurface

- Fully appraised with 5 well penetrations in Kuda Tasi and Jahal, including logs, core and flow tests
- Independent resource upgrade verified by RISC Advisory¹
- Significant upside mapped at Krill & Squilla oil discoveries²

2025 | Development Acceleration

- Strategic Alliance with SLB to accelerate project delivery and First Oil³
- Integrated SLB experts delivering SPS/SURF, Well Construction, Installation, Procurement (EPCI)

Q4 2025 | Farmin, FPSO

- FPSO secured – The PJI is a low-cost, fit-for-purpose solution enabling accelerated FID and First Oil⁴
 - TIMOR GAP farmin secures promoted share of development capex⁵
 - Equity raise to fund acquisition of FPSO⁴

1H 2026 | FEED, Funding, Rig & FID

- ✓ SLB FEED now completed⁶
- Barrenjoey appointed to run debt process to secure Finder's share of development capex
- Drilling rig evaluations and commercial discussions ongoing
- Targeting FID by June 2026

4Q 2027 | First Oil

- EPCI Phase 1Q 2026-4Q 2027
- 4Q 2027 Production and cash flow commences

¹ Refer ASX announcement 8/10/25; ² Refer ASX announcement 27/10/25;

³ Refer ASX announcement 17/6/25; ⁴ Refer ASX announcement 3/12/25;

⁵ Refer ASX announcement 25/9/25 ⁶ Refer ASX announcement 16/2/26

SLB Strategic Alliance

- SLB and FDR entered into an Alliance¹ to fast-track development of the Kuda Tasi and Jahal oil fields (KTJ Project)
- The alliance mobilises resources across the Subsea Integration Alliance (SIA) which comprises Subsea7, SLB and OneSubsea, bringing enormous resources and development capability to the KTJ Project which de-risks project execution
- Completion of key drilling and subsea FEED components approximately 12 months ahead of schedule - marking a major milestone towards First Oil²
- Final development concept shown on next slide
- FDR–SLB Integrated Project Team supervised by Finder COO, Mark Robertson
- Collaborative contracting model creates alignment and reduces risk

¹ Refer ASX announcement 17 June 25 “Finder Inks Strategic Alliance with SLB and Accelerates FEED” for further details

² Refer ASX announcement 16 February 26 “KTJ Project Passes Major Development Milestone” for further details

KTJ Final Development Concept ¹

FDR & SIA² delivered the Accelerated FEED Project on time and on budget

3 production wells connected to the PJI via flexible flowlines

Subsea ESPs optimise production, maximise field uptime & enhance recovery

Fast and cost-effective redeployment concept

Low carbon footprint through redeployment of existing FPSO

Amplus progressing engineering studies on PJI

FDR actively managing LLI procurement and contracting

¹ Refer FDR ASX Announcement 16 February 26 for further details

² The Subsea Integration Alliance (SIA) comprises Subsea7, SLB and OneSubsea

FEED Complete on time and on budget¹

SUBSURFACE AND RESERVOIR

Reservoir Model

- Detailed reservoir model constructed
- Model refined with latest technical updates, Ikan 3D repro, mapping, reservoir & production engineering, petrophysics
- Geomechanics analysis completed for drilling engineering and optimisation

SUBSEA PRODUCTION SYSTEMS

- Concept refined to a final engineered SPS basis of design to allow fast-track construction and development
- Detailed flow assurance refined and optimised SPS component sizing and production management strategies
- Downhole completion designed to maximise reservoir production performance and flexibility

Production Xmas Tree

Umbilical Cross-section

Subsea ESP Skid

DRILLING AND COMPLETION

- Well construction and engineering completed
- Two Kuda Tasi well designs improved to include a drill centre arrangement which reduces well and subsea costs
- Downhole completion designed to maximise reservoir production performance and flexibility

Production Well completion

FIELD CONSTRUCTION

- Field construction campaign designed
- Vessel, port and transport logistics identified
- Component commissioning and testing strategy
- Hook-up components to FPSO

Subsea operations vessel

¹ Refer FDR ASX Announcement 16 February 2026 for further details.

Strategic infrastructure ownership is expected to deliver material economic benefits

Acquisition

- Comprehensive due diligence by maritime & production facility experts
- Vessel ownership delivers significant strategic and economic benefits to Finder

US\$15m acquisition price

Cash and scrip consideration to Amplus Energy

Global target asset survey

Comprehensive process undertaken to identify suitable FPSOs

Accelerates First Oil

2027 year-end target

FID by mid-2026

Enabled by FPSO integration into FEED

PJI Highlights¹

- Fast and cost-effective redeployment solution for KTJ Project
- Excellent condition due to multiple shipyard campaigns between redeployments
- Detailed shipyard scope under preparation for life-extension and modification works for the KTJ Project

Operating track-record in highly regulated jurisdictions

Including UK, Norway, Brazil

11 successful deployments

Most redeployed FPSO in the world making it highly adaptable to suit field-specific requirements

Excellent Operating Uptime

Recently departed the Atlanta Oil Field, Brazil where it produced >30 MMbbl with 98% uptime

Fit for purpose

Double-hulled with internal turret and flexible topside processing facilities to suit most oil fields

Economic Benefits

Vessel ownership

- Significant opex reduction by eliminating charter payments
- Acceleration – clarity on FPSO solution facilitates FEED and FID
- Facilitates debt funding

Economics

- Lower opex improves economics and extends field life, enabling an extra 2-3 MMbbl of production
- Flexibility to tie-back future discoveries or develop Krill and Squilla
- Deferral of abandonment plus residual sale value of vessel

Production systems

- PJI highly compatible with KTJ
- 25-30,000 bopd production capability
- Smaller, cost-effective solution that is 'fit-for-purpose' for the KTJ Project

Amplus partnership

- Alignment with contractor for FPSO Operation & Management
- Familiarity with PJI
- Steve Gardyne to join FDR board bringing maritime and offshore facility management expertise¹

¹ Refer ASX announcements 3/12/25

Development Funding

- In 2025, Finder entered into a farmout transaction with TIMOR GAP securing 50% of the total development capex for the KTJ Project from FID, up to a gross cap of US\$338 million¹
- TIMOR GAP is a highly valued joint venture partner and the National Oil Company of Timor-Leste
- Finder retains a 66% participating interest in PSC 19-11 (paying 50%) and Operatorship
- The majority of Finder's remaining share of the development capex is expected to be funded by debt. Due to the strong cash flow profile of the KTJ Project, the project can support leverage to maximise value for shareholders
- Finder has appointed leading DCM group, Barrenjoey, to advise on debt structuring and run a process to secure debt funding ahead of FID targeting mid-2026. The process involves a mix of banks, credit funds and offtakers

¹ Refer ASX announcement 25 September 25 'Transformational Farmin with TIMOR GAP' for further details

KTJ Resources certified by RISC Advisory

 RISC	KTJ Gross Contingent Resource ¹ (MMbbl)	
	1C	2C
	19.0	25.5
	34.6	

Fully appraised with 5 wells – logs, core and well tests data

Covered by high-end Ikan 3D reprocessed seismic data

Excellent quality Laminaria Formation sandstone reservoir

Light high quality oil (55-60° API)

¹ Refer FDR ASX Announcement 8 October 2025 and Appendices in this presentation for further details. KTJ combined using probabilistic summation.

Krill & Squilla Oil Discoveries – Significant Upside Identified

New 2025 Ikan 3D Reprocessing
Step-change in image quality resolving shallow fault complexity and improving reservoir definition

Material Gross Rock Volume Increase
indicating larger resource potential

Enhanced Geological Confidence
Integration of new interpretation with geological studies underway to allow update to contingent resources

Future Growth Potential
Appraisal drilling could unlock additional development potential within PSC 19-11

FIELD	HISTORICAL MAPPING	2025 MAPPING	GRV
	GRV (m ³ x 10 ⁶)	GRV (m ³ x 10 ⁶)	Variance
Krill	136	217	+60%
Squilla	89	305	+243%

3D visualisation of the Top Laminaria Formation depth surface on the Ikan 2025 3D reprocessed seismic data

The KTJ Project is gathering momentum off the back of a series of major de-risking events

- ✓ Strategic Alliance with SLB
- ✓ TIMOR GAP Farmin
- ✓ RISC Independent Resource upgrade
- ✓ PJI acquisition
- ✓ SPS/D&C FEED Complete

We are in a phase of intense activity as we execute our acceleration strategy with a pipeline of upcoming catalysts...

Our strategic priorities are achievement of FID by mid-2026 and First Oil by year-end 2027

APPENDICES

UK North Sea – ILX Exploration Portfolio

Prolific Central North Sea

- All licences operated by Finder
- Strategic partnerships formed with nearby facility owners
- High impact exploration potential
- Wagtail discovery in P2530 contains 19.2 MMbbl¹ Gross 2C resources

¹ Refer resources table and disclosures in Appendices.

Australia – key positions in prolific basins

WA-547-P (100%)

- 508 MMboe over 3 key prospects¹
- Along trend from Dorado Discovery
- Santos/CVN/CPC JV targeting 2026 exploration drilling

AC/P 61 (100%)

- Contains large drill-ready Gem prospect
- Within prolific Vulcan Sub-basin
- Surrounded by oil discoveries

WA-547-P – Dorado trend

Farmout for 3D and drilling
Multiple Dorado trend prospects

AC/P 61 Gem

Farmout for drilling
137 MMbbl¹

¹ Resources are derived probabilistically and are unrisks. Where the petroleum resources have been aggregated/combined beyond the prospect/field level in this report by arithmetic summation, the aggregate low (1C/1U) estimate may be a very conservative estimate and the aggregate high estimate (3C/3U) may be a very optimistic estimate due to the portfolio effects of the arithmetic summation. Refer to Petroleum Resources table in Appendix for full details and disclosures.

Refer to next slide “Notes on Petroleum Resource Calculations” for further details and disclosures

Notes on Petroleum Resource Calculations

Table Notes

1. Finder calculates reserves and resources according to the Society of Petroleum Engineers Petroleum Resource Management System (SPE-PRMS) definition of petroleum resources. Finder reports reserves and resources in line with ASX listing rules.
2. The estimates of petroleum resources contained in this report are current at time of release. Finder confirms that it is not aware of any new information or data that materially affects the petroleum resource estimates, and all material assumptions and technical parameters underpinning the resource estimations continue to apply and have not materially changed.
3. Finder use probabilistic methods for its estimation of petroleum resources. Refer to ASX announcement dates noted in the table for full details on petroleum resource estimation methodology. Unless otherwise stated Finder has completed its own estimation of petroleum resources for its Timor-Leste and UK assets. For the KTJ Project (Kuda Tasi and Jahal oil fields) RISC completed an independent verification of the resources as announced 8 Oct 2025.
4. Australian assets were estimated independently, by ERC Equipoise Pte Ltd (ERCE), and methodology for their estimation is set out in Annexure F of the Prospectus dated 25 February 2022.
5. Unless otherwise stated, where the Petroleum resources have been aggregated beyond the prospect/field level in this report by arithmetic summation, the aggregate low (1C/1U) estimate may be a very conservative estimate and the aggregate high estimate (3C/3U) may be a very optimistic estimate due to the portfolio effects of the arithmetic summation. Throughout this announcement, totals may not exactly reflect the arithmetic summation due to rounding.
6. Conversion Factors - unless otherwise stated, all petroleum resource estimates are quoted at standard oilfield conditions of 14.696 psi (101.325 kPa) and 60 degrees Fahrenheit (15.56 deg Celsius). MMboe means millions of barrels of oil equivalent. Gas volumes are converted to oil equivalent volumes via a constant conversion factor, which for Finder is 6.0 mscf of dry gas per 1 bbl. Volumes of oil and condensate are converted from MMbbls (million stock tank barrels) to MMboe on a 1:1 ratio.

Contingent Resources

7. Contingent resources are estimated quantities of petroleum that are potentially recoverable but not yet considered mature enough for commercial development due to one more contingencies such as technological or business hurdles or where evaluation of the accumulation is insufficient to clearly assess commerciality. These estimates have a risk of development. For contingent resources to move into the reserves category, the key conditions, or contingencies, that prevented commercial development must be clarified and removed. Further appraisal and/or evaluation is required to mature the contingent resources and move it into the reserves category.

The Contingent Resources have been stated on an unrisks basis and have not been adjusted for the associated chance of development.

Prospective Resources

8. The Prospective Resources have also not been adjusted for the geological chance of success (COS) or chance of development (COD). Quantifying the COD requires consideration of both economic contingencies and other contingencies, such as legal, regulatory, market access, political, social licence, internal and external approvals and commitment to project finance and development timing.
9. Prospective Resources are the estimated quantities of petroleum that may potentially be recovered by the application of a future development project(s) related to undiscovered accumulations. These estimates have both a risk of discovery and a risk of development. Further exploration appraisal and evaluation is required to determine the existence of a significant quantity of potentially recoverable hydrocarbons.
10. Geological Chance of Success (COS) takes into account the chance of the prospect encountering the necessary elements of trap, seal, resource and hydrocarbon charge.

Qualified Petroleum Resources Evaluator Statement

The Reserves and Resources estimates in this release are based on, and fairly represent, information and supporting documentation prepared by, or under the supervision of a Qualified Petroleum Reserves and Resources Evaluator (QPRRE) employed by Finder. The QPRRE is Mr Aaron Bond who holds a B.Sc.(Hon) in Geology, and is a member of the American Association of Petroleum Geologists and the Society of Petroleum Engineers. Mr. Bond is the Exploration Manager for the Company and has worked in the petroleum industry as a practicing geologist for more than 23 years. Mr. Bond has consented to the inclusion in this report of matters based on his information in the form and context in which it appears.

Disclaimers and Cautionary Statement

Forward-looking statements

This report contains certain “forward-looking statements”, which can generally be identified by the use of words such as “will”, “may”, “could”, “likely”, “ongoing”, “anticipate”, “estimate”, “expect”, “project”, “intend”, “plan”, “believe”, “target”, “forecast”, “goal”, “objective”, “aim”, “seek” and other words and terms of similar meaning. Finder cannot guarantee that any forward-looking statement will be realised. Achievement of anticipated results is subject to risks, uncertainties and inaccurate assumptions. Should known or unknown risks or uncertainties materialise, or should underlying assumptions prove inaccurate, actual results could vary materially from past results and those anticipated, estimated or projected. You should bear this in mind as you consider forward-looking statements, and you are cautioned not to put undue reliance on any forward-looking statement.

Cautionary Statement

There are numerous uncertainties inherent in estimating reserves and resources and in projecting future production, development expenditures, operating expenses and cash flows. Oil and gas reserve engineering and resource assessment must be recognised as a subjective process of estimating subsurface accumulations of oil and gas that can’t be measured in an exact way. Oil and gas Reserves and Resource estimates are expressions of judgment based on knowledge, experience and industry practice. Estimates that were valid when originally calculated may alter significantly when new information or techniques become available. Additionally, by their very nature, Reserve and Resource estimates are imprecise and depend to some extent on interpretations, which may prove to be inaccurate. As further information becomes available through additional production, drilling and analysis, the estimates are likely to change. This may result in alterations to development and production plans which may, in turn, adversely impact the Company’s operations. Reserves estimates and estimates of future net revenues are, by nature, forward looking statements and subject to the same risks as other forward looking statements.

The estimates of petroleum resources contained in this report are current at time of release. Finder confirms that it is not aware of any new information or data that materially affects the petroleum resource estimates, and all material assumptions and technical parameters underpinning the resource estimations continue to apply and have not materially changed.
