Whundo Copper Mine - Historic Open Pit

Disclaimer

Forward-Looking Statements

Statements in this announcement which are not statements of historical facts, including but not limited to those relating to the proposed transaction, are forward-looking statements. These statements instead represent management's current expectations, estimates and projections regarding future events. Although management believes the expectations reflected in such forward-looking statements are reasonable, forward-looking statements are based on the opinions, assumptions and estimates of management at the date the statements are made and are subject to a variety of risks and uncertainties and other factors that could cause actual events or results to differ materially from those projected in the forward-looking statements. Accordingly, investors are cautioned not to place undue reliance on such statements.

Competent Person Statement

The information in this report that relates to Exploration Targets, Exploration Results, Mineral Resources or Ore Reserves is based on information reviewed by Mr Thomas Reddicliffe a Competent Person who is a Fellow of the Australasian Institute of Mining and Metallurgy. Mr Reddicliffe is a Non-Executive Director and Technical Consultant to GreenTech Metals Ltd. Mr Reddicliffe has sufficient experience that is relevant to the style of mineralisation and type of deposits under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves', and a Specialist under the 2015 Edition of the 'Australasian Code for Public Reporting of technical assessments and valuations of mineral assets'. Mr Reddicliffe consents to the inclusion in the report of the matters based on his information and in the form and context in which it appears.

Cautionary Statement

This document is confidential and may not be reproduced, redistributed or passed on, directly or indirectly. This document is neither a prospectus nor an offer to subscribe for fully paid ordinary shares. GreenTech Metals and its directors, employees and consultants make no representations or warranty as to the accuracy, reliability or completeness of this document, and have no liability, including liability to any person by reason of negligence of, or contained in or derived from, or for any omissions from this document, except liability under statute that cannot be excluded. This document contains reference to certain targets and plans of GreenTech Metals which may or may not be achieved. The performance of GreenTech Metals may be influenced by a number of factors, uncertainties and contingencies, many of which are outside the control of GreenTech Metals and its directors, staff and consultants.

The historical Munni Munni results presented in this release include exploration results collected between approximately 1985-2021. While drilling and assay QA/QC procedures generally match industry standard at the time the work was done, they are not consistent with current industry practice required to meet the 2012 JORC code for reporting of exploration results. As such these results are stated here to provide an indication of the exploration potential of the Munni Munni project tenements. The estimates of the quantity and grade of mineralisation for the Munni Munni project tenements referred to in this announcement are "historical estimates" within the meaning of the ASX listing rules and are not reported in accordance with the JORC Code 2012. GreenTech notes that a competent person has not done sufficient work to disclose the corresponding exploration results in accordance with the JORC Code 2012; it is uncertain that following evaluation and further exploration work that the historical estimates will be able to be reported as mineral resources in accordance with the JORC Code 2012; it is possible that following further evaluation and/or exploration work that the confidence in the prior reported exploration results may be reduced when reported under the JORC Code 2012; that nothing has come to the attention of GreenTech that questions the accuracy or reliability of the former owner's exploration results, but GreenTech is in the process of independently validating the previous owner's exploration results and therefore is not to be regarded as reporting, adopting or endorsing those results. GreenTech will continue to review and validate the data to enable the results to be reported in accordance with the JORC Code 2012. The levels of PGE (3E), Copper, Nickel reported from past activities, are a key factor in guiding GreenTech's exploration strategy. The previous activity, which produced these results, involved multiple rounds of drilling. The results are considered to have been generated from work programs representing usual industry practice for the time they were collected and analysed at commercial laboratories which service the mineral exploration industry. In the professional opinion of the Competent Person, GreenTech has, however, done sufficient verification of the data, to provide sufficient confidence that drilling and assays were performed to adequate industry standards and is fit for the purpose of planning exploration programs and generating targets for further investigation. The Competent Person named in this announcement has confirmed that the information in this announcement is an accurate representation of available data.

No New Information

To the extent that this document contains references to prior exploration results, historical estimates where applicable, and Mineral Resource Estimates for the Whundo project and the Munni Munni Project, which have been cross referenced to previous market announcements made by the Company, unless explicitly stated, no new information is contained. The Company confirms that it is not aware of any new information or data that materially affects the information included in the relevant market announcements and, in the case of estimates of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcements continue to apply and have not materially changed.

Investment Highlights

West Pilbara asset base extensively de-risked through prior exploration and mining

Cornerstone PGE-Cu-Ni Project

- Transformational acquisition of Munni Munni Project completed
- Re-estimating historic Mineral Resource Estimate* (2002) to JORC (2012) standard

Tier 1 Analogues

- Geological parallels with Bushveld, Stillwater and Great Dyke (> 40 Moz districts)**
- Layered Mafic intrusion hosting PGE + Au + Cu-Ni suite

Cu and Au Leverage

- 100% owned Whundo Cu-Zn-Au historic mining project adjoining Munni Munni
- Gold credits to be included in Whundo JORC Resource update

Consolidated District

- Unified ownership of >500km² district
- Munni Munni mineralisation across 13km of strike with potential for a further +8km
- Proximal to infrastructure and port

Attractive Entry Point

- At early stage of consolidated ownership with work programmes completed – results imminent
- Multiple value creation milestones ahead
- Low valuation offers leverage to success

Team Track Record

- Expanded technical and corporate team
- Dr Kevin Frost on technical team credited with discovery of Gonneville and Spotted Quoll

* Cautionary Statement

The estimates are historical estimates and are not reported in accordance with the JORC Code (2012); a competent person has not done sufficient work to classify the historical estimates as mineral resources or ore reserves in accordance with the JORC Code (2012); and it is uncertain that following evaluation and/or further exploration work that the historical estimates will be able to be reported as mineral resources or ore reserves in accordance with the JORC Code (2012).

*PGE = Platinum Group Elements

Transformative acquisition closed 2 February 2026

1. As at 7 April 2026. Options on Issue include 29,375,000 quoted options (GREO) exercisable at \$0.12 and expiring 9 January 2028, and 62,352,778 unquoted options across multiple tranches with exercise prices ranging from \$0.0825 to \$0.50 with expiration dates between July 2026 and March 2031. Performance Rights currently on issue is 15,000,000. All ordinary shares, options and performance rights figures sourced from the Company's issued capital report supplied by Computershare.

Share Price Performance

Ownership Structure

Board and Management

A Highly Experienced Leadership and Advisory Team

Board of Directors

Simon Kidston
Non-Executive Chairman

30-year investment banking, founded developer Genex (GNX.ASX, sold to J-Power for \$1.2 billion EV July 2024). Built multiple ASX-listed mining & renewable companies.

Tom Reddicliffe
Non-Executive Director & Technical Consultant

Geologist with 40 years exploration, evaluation and executive experience in the minerals industry. Current NED of West Coast Silver (WCE) & Gibb River Diamonds (GIB).

Stefan Murphy
Non-Executive Director

25+ years experience across geology, operations and mining executive. Began his career as a geologist at BHP iron ore later working in capital markets and M&A roles in Australia and the UK. Current MD of CZR Resources (ASX:CZR)

Management

James Rattenbury
Chief Executive Officer

18 years resources industry experience, working in mining and exploration as a geologist with OceanaGold and Fortescue before transitioning to private equity mining finance with a global investment focus as an Investment Principal and Investment Committee Member with Resource Capital Funds (RCF).

Technical Advisor

Dr Kevin Frost
Technical Advisor (Geology)

25+yrs international experience in nickel-copper-PGE mineral exploration. Current Technical Advisor, Chalice Mining and formerly GM Exploration. Internationally recognised mineral discoverer of Gonneville and Spotted Quoll.

Munni Munni PGE-Copper-Nickel Project

225km² Archean layered mafic intrusion – largest in West Pilbara Craton

- Completed acquisition of 70% project interest (option to 80%) – from Alien Metals Limited (AIM:UFO)
- Historic Resource of 23.6Mt at 2.9g/t 4E (Pt, Pd, Rh) + Au over 9km of strike^{1*} of Ferguson Reef
- Defined mineralisation across Ferguson Reef has gaps due to historic ownership and tenement boundaries
- Consolidation of tenure provides access to +13km of the Ferguson Reef, with historical drill intersections showing mineralisation remains continuous
- QA/QC underway to re-estimate Historic Resource to JORC (2012)
 - GreenTech drilling completed in March 2026
 - 16 historic DD holes also resampled
 - Assays due mid-April

Munni Munni Historic Resource* - (100% basis)^{1,2}

	Million Tonnes	Grade			Metal
		4E PGE g/t	Cu %	Ni %	4E PGE Moz
Total	23.6	2.90	0.15	0.09	2.20

Map of Northern extent of Munni Munni intrusive and Ferguson Reef³ – includes Section traces

- Refer ASX Announcement Platina Resources Ltd (ASX:PGM) "Annual Report to Shareholders 2007" Dated 26 September 2007
- Refer ASX Announcement 8 April 2026 - Munni Munni Historic Data Reveals Material Potential Upside

*Cautionary Statement

The estimates are historical estimates and are not reported in accordance with the JORC Code (2012); a competent person has not done sufficient work to classify the historical estimates as mineral resources or ore reserves in accordance with the JORC Code (2012); and it is uncertain that following evaluation and/or further exploration work that the historical estimates will be able to be reported as mineral resources or ore reserves in accordance with the JORC Code (2012).

Munni Munni PGE-Copper-Nickel Project

Historic exploration focused on high-grade PGE Reef

Prior Exploration (since 1980's)

- Historic exploration focused on central zones of Ferguson Reef
- Two targeted mineralisation styles - High Grade Reef (PGE) and Contact-Type (Cu-Ni ± PGE) contiguous with PGE Reef
- Excellent lateral and down plunge ($\sim 45^\circ$) continuity drilled to over 700m depth in central zone
- Total of 396 holes (162 DD & 234 RC) drilled for 93,567m
- Historic drill core is extremely well-preserved supporting resampling and assaying as part of QA/QC process

Upside potential

- Interrogation of drill hole database and drill logs has identified multiple **+4g/t PGE4** target zones for follow-up¹
- Reef thickening and elevated sulphide tenor indicate localised sulphide accumulation, consistent with magmatic sulphide processes
- Cu + Ni sulphide overlooked in historic analysis – e.g. historic drill hole MMD34 as displayed on Section = 11m @ 3.6g/t PGE4 from 539m - **coincident 8.25m @ 0.75% Cu, 0.4% Ni from 541m**¹

Section through Central Zone of Ferguson Reef - historic drill holes¹

1. Refer ASX Announcement 8 April 2026 - Munni Munni Historic Data Reveals Material Potential Upside

Munni Munni PGE-Copper-Nickel Project

Shallow dipping Eastern zones demonstrate continuity

- Plunge of Ferguson Reef in Eastern zones ~30°, with mineralisation to surface
- Historic Resource only includes Cu + Ni when reporting within high grade PGE reef domains*
- Shallow zones below 1.9g/t PGE4 cut-off used in Historic Resource* potentially attractive where Cu + Ni coincident mineralisation present
- Historical studies indicate mineralisation responds well to traditional flotation and concentration techniques¹
- Updated metallurgical test work underway

Section through Eastern zone of Ferguson Reef – historic drill holes²

1. Refer ASX Announcement Helix Resources Limited (ASX:HLX) "First Quarter Activities and Cashflow Report (Part B)", dated 31 October 2002
2. Refer ASX Announcement 8 April 2026 - Munni Munni Historic Data Reveals Material Potential Upside

*Cautionary Statement

The estimates are historical estimates and are not reported in accordance with the JORC Code (2012); a competent person has not done sufficient work to classify the historical estimates as mineral resources or ore reserves in accordance with the JORC Code (2012); and it is uncertain that following evaluation and/or further exploration work that the historical estimates will be able to be reported as mineral resources or ore reserves in accordance with the JORC Code (2012).

Munni Munni PGE-Copper-Nickel Project

Shallow bulk tonnage potential including Cu + Ni not previously pursued

- GRE review has identified significant shallow mineralisation in historic drilling – not constrained to PGE Reef
- Drilling logs suggests Cu+Ni sitting in gabbro hanging-wall – limited assay data above PGE reef horizon (limited sampling for shallow sulphides)
- GRE resampling programme extended beyond zones previously assayed where visible sulphides in DD core
- Limited assaying for rhodium in historic holes – opportunity to improve PGE4 grade¹
- Oxidation profile close to surface with fresh sulphides in trenches

Section highlighting Cu + Ni mineralisation outside of Ferguson Reef - historic drill holes¹

1. Refer ASX Announcement 8 April 2026 - Munni Munni Historic Data Reveals Material Potential Upside

Munni Munni PGE-Copper-Nickel Project

Next Steps - Broadening focus beyond the Ferguson Reef

- Munni Munni is a 225km² intrusive identified by Geoscience Australia as high priority for a PGE-Cu-Ni ultramafic hosted sulphide discovery
- 2026 exploration activities include:
 - Soil and rock chip sampling for north-western websterite zones – potential repeats of PGE reefs lower in ultra-mafic sequence
 - FLEM geophysical surveys targeting Cu+Ni surface anomalies on Eastern and Western limbs of intrusion
- Works programme design for Q2-Q3 2026
 - Balance de-risking of Historic Resource* and building geological understanding
 - Unlock scale potential – design to be driven by pending results

Building exploration model for Tier-1 PGE-Cu-Ni sulphide discovery beyond defined Ferguson Reef

Munni Munni Historic Resource footprint and tenure overlaying magnetic geophysical survey*

*Cautionary Statement

The estimates are historical estimates and are not reported in accordance with the JORC Code (2012); a competent person has not done sufficient work to classify the historical estimates as mineral resources or ore reserves in accordance with the JORC Code (2012); and it is uncertain that following evaluation and/or further exploration work that the historical estimates will be able to be reported as mineral resources or ore reserves in accordance with the JORC Code (2012).

Whundo Copper-Zinc-Gold Project

Whundo Copper-Gold-Zinc Project

Strategically positioned as standalone asset or part of integrated project scope

Located <10km from Munni Munni Project

- Project comprises six known Cu-Zn-Au VMS style matrix and massive sulphide mineralised bodies along 2km of a prospective contact
- Current JORC (2012) Resource of 6.2Mt @ 1.12 % Cu, 1.04 % Zn (71% indicated, 29% Inferred)¹ – Resource shallow from surface and amenable to open-cut mining
- All holes targeting EM plates to date intersected mineralisation, which remains open at depth and along strike
- Deposits sit on granted Mining Leases, with prior mining activities concluded in 2008
- Mineralised stockpiles remain on site
- Similar deposit type to Develop's Sulphur Spring Cu-Zn VMS deposit (under construction)²
- Potential to integrate with Munni Munni or to pursue toll treatment opportunities at Radio Hill plant (Artemis Resources), or Whim Creek (Anax Resources)

Munni Munni Ownership Timeline

Period	Owner / Transaction	Ownership %	Comment
1980s	Hunter Resources	100 %	First discovery and exploration of PGE reef; ~20–30 Mt resource outlined but deemed sub-economic.
1997	Helix Resources → JV with Hunter	80 % JV earn-in	Helix acquired 80 % interest in eight mining leases from Hunter Resources
2000	Helix Resources	100 %	Acquired remaining 20 % from Hunter. Commenced scoping study and extensive drilling.
2001–2003	Lonmin plc JV with Helix	up to 50 % earn-in right	Lonmin invested A\$8m to fund feasibility; withdrew Mar 2003 after \$8.5 m spent; Helix resumed 100 %.
2006	Helix spin-off to Platina Resources Ltd	100 % (Platina)	Helix transferred PGM assets (incl. Munni Munni) to Platina as part of ASX IPO (Apr 2006).
2015	Artemis Resources → Platina	70 % earn-in	Artemis to earn-in over 3 years for 70 % interest in Munni Munni (Platina retains 30 %).
2018	Artemis Resources + Platina JV	70 / 30 %	Artemis satisfied earn-in; JV formalised
2022	Alien Metals Ltd (UK) acquired Artemis and Platina stakes	100 %	Alien acquires 100% interests from joint venture partners Artemis and Platina (28-Feb-22)
2022 – 2025	Alien Metals Ltd (Owner + Operator)	100 %	Consolidated ownership for first time in project's history; advancing under Pinderi Hills district with Elizabeth Hill synergies.
2026	GreenTech	70%	Acquired 70% from Alien Metals with option to increase to 80%. First unified control of district in 30 years with contiguous tenure of 346km ²
