No Ore Reserves have currently been defined on the Pinnacles JV Gold Project, nor the Wallbrook Gold Project. There has been insufficient exploration and technical studies to estimate an Ore Reserve and it is uncertain if further exploration and/or technical studies will result in the estimation of an Ore Reserve. The potential for the development of a mining operation and sale of ore from the Pinnacles JV Gold Project or the Wallbrook Gold Project has yet to be established.

CAUTIONARY STATEMENT – SCOPING STUDY

The Scoping Study referred to in this presentation (slide 10) is based on the material assumptions outlined in the announcement released to ASX on 4 June 2024. The Scoping Study has been undertaken to determine the viability of open pit mining and third-party toll treatment of the Crusader-Templar gold deposit. It is a preliminary technical and economic study of the potential viability of the Project. It is based on low level technical and economic assessments that are not sufficient to support estimation of ore reserves. The Company has concluded that it has reasonable grounds for disclosing a production target which includes an amount of Inferred Mineral Resources. There is a low level of geological confidence associated with Inferred Mineral Resources and there is no certainty that further exploration work will result in the determination of Indicated Mineral Resources or that the production target itself will be realised. Inferred Mineral Resources comprise approximately 27% of the modelled mining inventory. Further evaluation work and appropriate studies are required before Nexus will be able to estimate any ore reserves or to provide any assurance of an economic development case. These include the availability of funding. While Nexus considers all the material assumptions to be based on reasonable grounds, there is no certainty that they will prove to be correct or that the range of outcomes indicated by the Scoping Study will be achieved. To achieve the range of outcomes indicated in this Scoping Study, funding in the order of \$10 million to \$15 million will likely be required. Investors should note that there is no certainty that Nexus will be able to raise that amount of funding when needed. It is also possible funding may only be available on terms that may be dilutive to or otherwise affect the value of Nexus shares. It is also possible that Nexus could pursue other 'value realisation' strategies such as a sale, partial sale or operational joint venture of the Project. If it does, this could materially reduce Nexus' proportionate ownership of the Project. Potential funding options may also include third parties through; right to mine JV, operational JV or a processing agreement. At this stage, the Company has not yet secured any contracts and accordingly cannot make an assurance that it will have a processing contract available and, on the assumptions made, in this Scoping Study. The Company will update the market accordingly if any contracts are entered into. The Study has been completed to a level of accuracy of +/-35% in line with industry standard accuracy for this stage of development. Given the uncertainties involved, investors should not make any investment decisions based solely on the results of the Scoping Study.

The information in this presentation that relates to the Open Pit Mining Scoping Study for Crusader-Templar and to the Production Target derived from the Scoping Study is based on information compiled by Mr Gary McCrae, a Competent Person who is a Member or Fellow of The Australian Institute of Mining and Metallurgy and a full time employee of Minecomp Pty Ltd. Mr McCrae has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the "Australasian Code for Reporting Exploration Results, Mineral Resources and Ore Reserves". Mr McCrae consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.' The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement of the Scoping Study and, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

NSW MINERALS PROJECT

- Over 7,500km² of prospective tenure
- First mover advantage allows for regional scale exploration targeting with one of the largest pegging exercises in NSW history
- Exploration for a range of minerals

Gold - Copper - Lithium - Caesium - Tantalum - Tin

- Lithium-caesium-tantalum (LCT) pegmatites are associated with highly fractionated, reduced S-type Silurian granites that often also host tin mineralisation
- The Wagga-Omeo Zone (WOZ) – host to extensive emplacement of Silurian granites and tin mining operations and occurrences
- Hence WOZ is determined to be highly prospective for LCT pegmatites and associated tin mineralisation
- The WOZ extends ~700km in a north-south direction and averages ~80km east-west

NSW MINERALS PROJECT

7,500KM² “MEGA PEG”

- / A review of open file geology and whole-rock geochemistry confirmed that much of the exploration ground granted in southern NSW is underlain by reduced, fractionated, peraluminous S-type granites
- / Southern Geoscience Consultants have completed the interpretation and targeting exercise covering the project area
- / Numerous high priority target zones have been identified that are considered prospective for gold, copper, LCT pegmatites and tin mineralisation
- / The targeting exercise reviewed geological and geophysical data with the aim being to identify mineralisation “signatures”
- / These signatures, in conjunction with structural setting, structural complexity, dilatational settings (faults/shear zones) and proximity to known mineral occurrences identified the priority target zones
- / Field crews to continue ground truthing and orientation sampling of priority targets
