ASX ANNOUNCEMENT

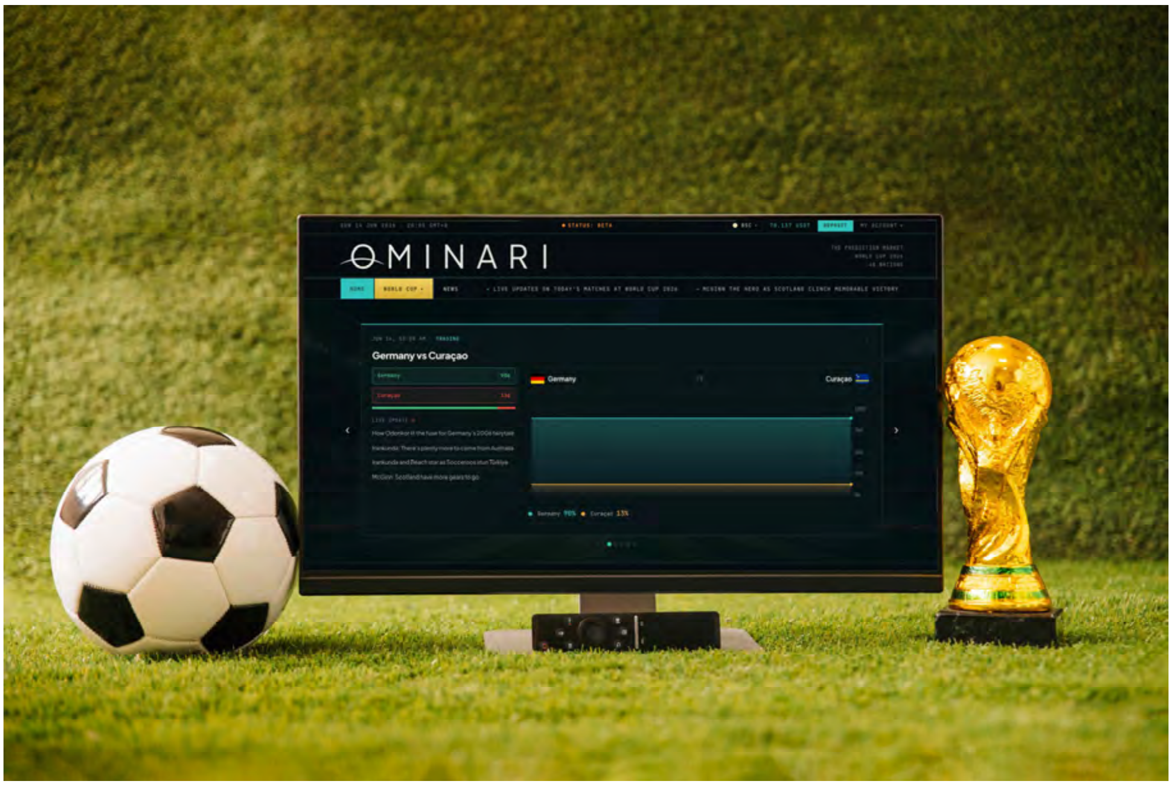
15 June 2026

OVT LAUNCHES PREDICTION MARKET PLATFORM OMINARI FOR FIFA WORLD CUP 2026

Highlights

- **OMINARI.COM is now live:** OVT has launched Ominari, its wholly owned prediction market platform, in initial release for users in Southeast Asia only with additional markets to be added subject to legal and regulatory compliance.
- **FIFA World Cup launch catalyst:** Ominari launches with FIFA World Cup outcome markets, providing an immediate global event window for user acquisition, engagement and transaction activity.
- **How Prediction Markets operate:** users take positions in event contracts and outcome markets, rather than traditional bookmaker-style bets or wagers. OMINARI.COM is now live and accepting user transactions.
- **OVT's infrastructure and licensing competitive advantage over competitors Polymarket and Kalashi:** Ominari launches with a material competitive advantage over the established competitors with an integrated operating stack combining payments, settlement, authentication, banking technology, AI analytics and Labuan licence infrastructure. Ominari has full control over the core commercial layers of a prediction market platform, from user onboarding and funds flow through to transaction processing, settlement and market analytics. With a Southeast Asia-first strategy and infrastructure embedded from launch, OVT believes Ominari is well positioned to compete directly with global incumbents Polymarket and Kalshi for users, liquidity and transaction volume in a region that remains materially underserved.
- **Expansion roadmap:** the current FIFA release is an initial launch, with additional sports, event categories, platform features, payment options and regional markets to be added in the upcoming weeks.
- **Large and rapidly scaling market opportunity:** Prediction markets have moved from niche adoption to significant digital market activity, with public data showing combined monthly trading volumes on Kalshi and Polymarket increasing from less than US$5 billion

in September 2025 to approximately US$24 billion in April 2026[1]. Ominari launches into this growth with an initial Southeast Asia focus, targeting a region of almost 700 million people, widespread smartphone usage, increasing digital-wallet adoption and a large mobile-first consumer base.



Ominari Launch

Ovanti Limited ("OVT", "Ovanti" or the **"Company")** is pleased to announce the launch of **OMINARI.COM** ("**Ominari**" or the "**Platform**"). Ominari is OVT's wholly owned prediction market platform, initially available to users in Southeast Asia and focused on 2026 FIFA World Cup outcome markets.

Ominari is live in its initial release environment and accepting user registrations and event-market positions/ transactions. The Platform allows users to participate in event contracts and outcome

markets, with pricing that reflects changing market-implied probabilities as new information, liquidity and participant activity enter the market.

The launch marks OVT's direct entry as a prediction market platform owner, building on the Company's 9 June 2026 announcement regarding its exclusive payment processing and embedded technology infrastructure partnership with Yuno.trade.

Why FIFA, Why Now

The 2026 FIFA World Cup provides a timely launch catalyst for Ominari. The tournament runs from 11 June to 19 July 2026 and features an expanded 48-team, 104-match format, creating a daily calendar of high-profile sporting outcomes and real-time probability movements.

Initial Ominari coverage includes include match outcomes, group progression, knockout-stage advancement, tournament finalists, tournament winner markets and other football-related outcome markets.

Major global sports events drive concentrated periods of user acquisition, repeat engagement and transaction frequency, which directly aligns with OVT's payments and platform infrastructure capabilities.

Designed to Compete with Polymarket and Kalshi

Ominari has been designed as a direct competitor to leading prediction market platforms, including Polymarket and Kalshi. The Platform is intended to replicate and localise the core features that have driven global adoption of prediction markets: simple event discovery, transparent outcome pricing, fast market participation, digital-wallet funding, rapid settlement and high-frequency engagement around live events.

Reuters, citing Pew Research Center data, reported that combined monthly global trading volumes on Kalshi and Polymarket increased nearly fivefold from September 2025 to approximately US$24 billion in April 2026. This growth demonstrates the speed at which prediction markets have moved from niche adoption to a significant category of digital market infrastructure.

OVT believes Ominari can compete by combining global prediction market functionality with a Southeast Asia-first operating model, localised payment and settlement infrastructure, AI-powered outcome analytics and OVT's existing banking technology capabilities through iSentric and Datamorph.

OVT Infrastructure and Revenue Model

Ominari gives OVT a live operating environment for its prediction market technology stack, including payment workflows, transaction processing, wallet funding, settlement, authentication, reconciliation, risk controls, user onboarding and platform reporting.

As disclosed in OVT's ASX announcement dated 9 June 2026, the Company has access to Labuan licence infrastructure and related payment capabilities. Together with OVT's existing payments and banking technology experience, this provides the Company with infrastructure that can support Ominari's Southeast Asia launch and future regional expansion.

Ominari is designed to create a new transaction-led revenue channel for OVT. As owner of the Platform, OVT is positioned to monetise user activity through the payments, settlement and transaction infrastructure layer, with revenue opportunity expected to scale as users, event contracts, market participation and transaction volumes increase.

Initial Launch, Broader Roadmap

FIFA is the initial launch vertical, not the full product roadmap. Following the World Cup launch period, OVT intends to progressively add additional event categories across sport, culture, macroeconomics, digital assets, technology, entertainment, geopolitics and business outcomes.

Planned feature development includes enhanced market discovery, watchlists, notifications, leaderboards, rewards, user profiles, referrals, multilingual user journeys, additional payment options, user-created markets and further AI-supported probability analytics.

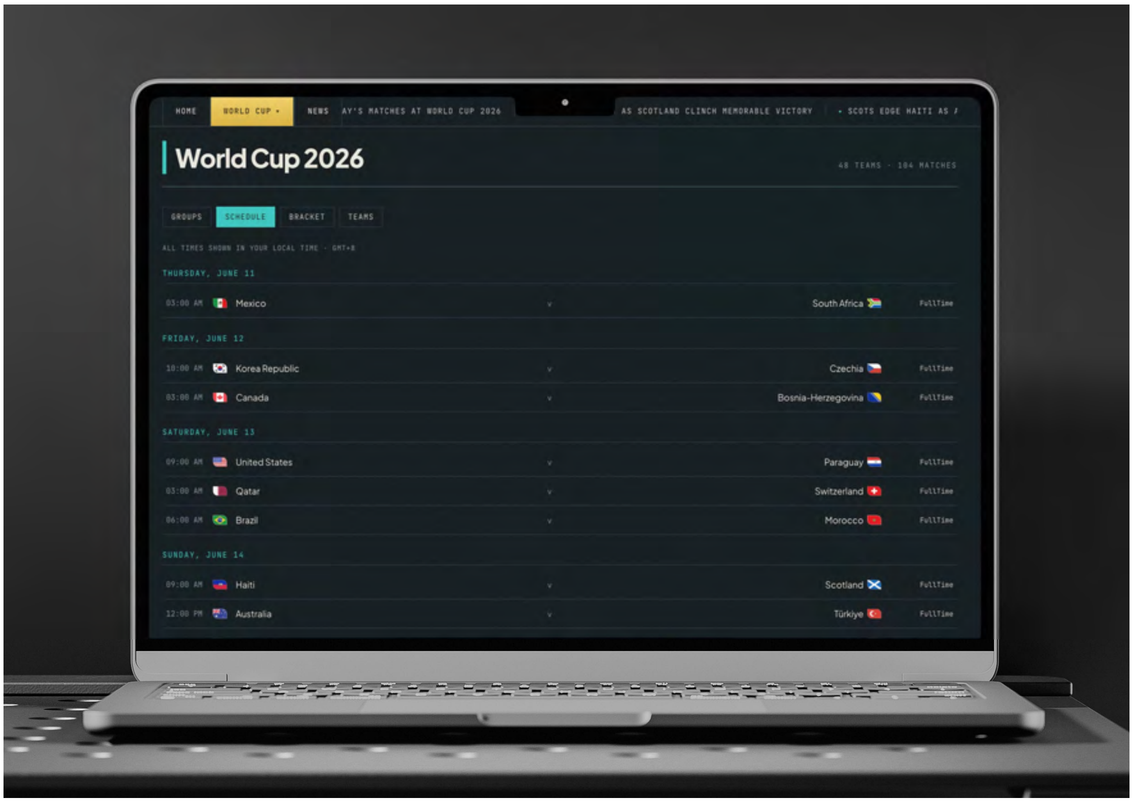
The Company believes Ominari, together with the Yuno.trade partnership, gives OVT a dual prediction market strategy: a wholly owned consumer-facing platform through Ominari, and a broader infrastructure and payment processing partnership model through Yuno.trade. This positions OVT to participate in the sector both as platform owner and as infrastructure provider.

Chairman and Global Chief Executive Officer's Comment on the Official Launch of OMINARI.COM

Mr Daler Fayziev, Chairman of the Board and Global Chief Executive Officer of Ovanti Ltd, said:

"Ominari is Ovanti's own entry into the prediction market sector and is designed to compete directly with global incumbents. By integrating OVT's payments, settlement, authentication, AI analytics and licence infrastructure with a Southeast Asia launch focus, Ominari gives the Company a distinct advantage over its competitors. The FIFA World Cup

is the first vertical, with additional markets, features and regional expansion planned over time."



The release of this announcement was authorised by Josh Quinn, Non-Executive Director and Company Secretary on behalf of the Board of Ovanti Ltd.
