ASX ANNOUNCEMENT
30 April 2026

QUARTERLY ACTIVITIES REPORT March 2026

HIGHLIGHTS

- **Coopers CID Prospect RC drilling approval received following completion of a flora and fauna survey**
- **Carney's CID Prospect RC drilling approval also received**
- **Heritage Surveys on both prospects scheduled with the Native Title Holder, Karlka Nyiyaparli Aboriginal Corporation (KNAC)**
- **Heritage Protection Agreements for the Special Prospecting Licences at the Peninsula Prospect with KNAC for final execution allowing advance to grant**
- **Rocklea Gold Project expanded with applications for an additional four EL's surrounding existing tenure and recently acquired EL application in last quarter**
- **Orientation stream sediment and rock chip sampling carried out at Rocklea over prospective geological structures with results expected early next quarter**
- **Mapping and sampling targeting anomalous gold in stream sediment samples to commence at the Pilgangoora North Project**
- **Cash at bank of $2.7m at quarter end enables broad range of exploration activities to continue toward drilling**

EXPLORATION ACTIVITIES

Peregrine Gold Limited ("**Peregrine**" or the "**Company**") (ASX: **PGD**) is pleased to provide an update on its exploration activities during the quarter ended 31 March 2026 at its portfolio of projects (Figure 1).

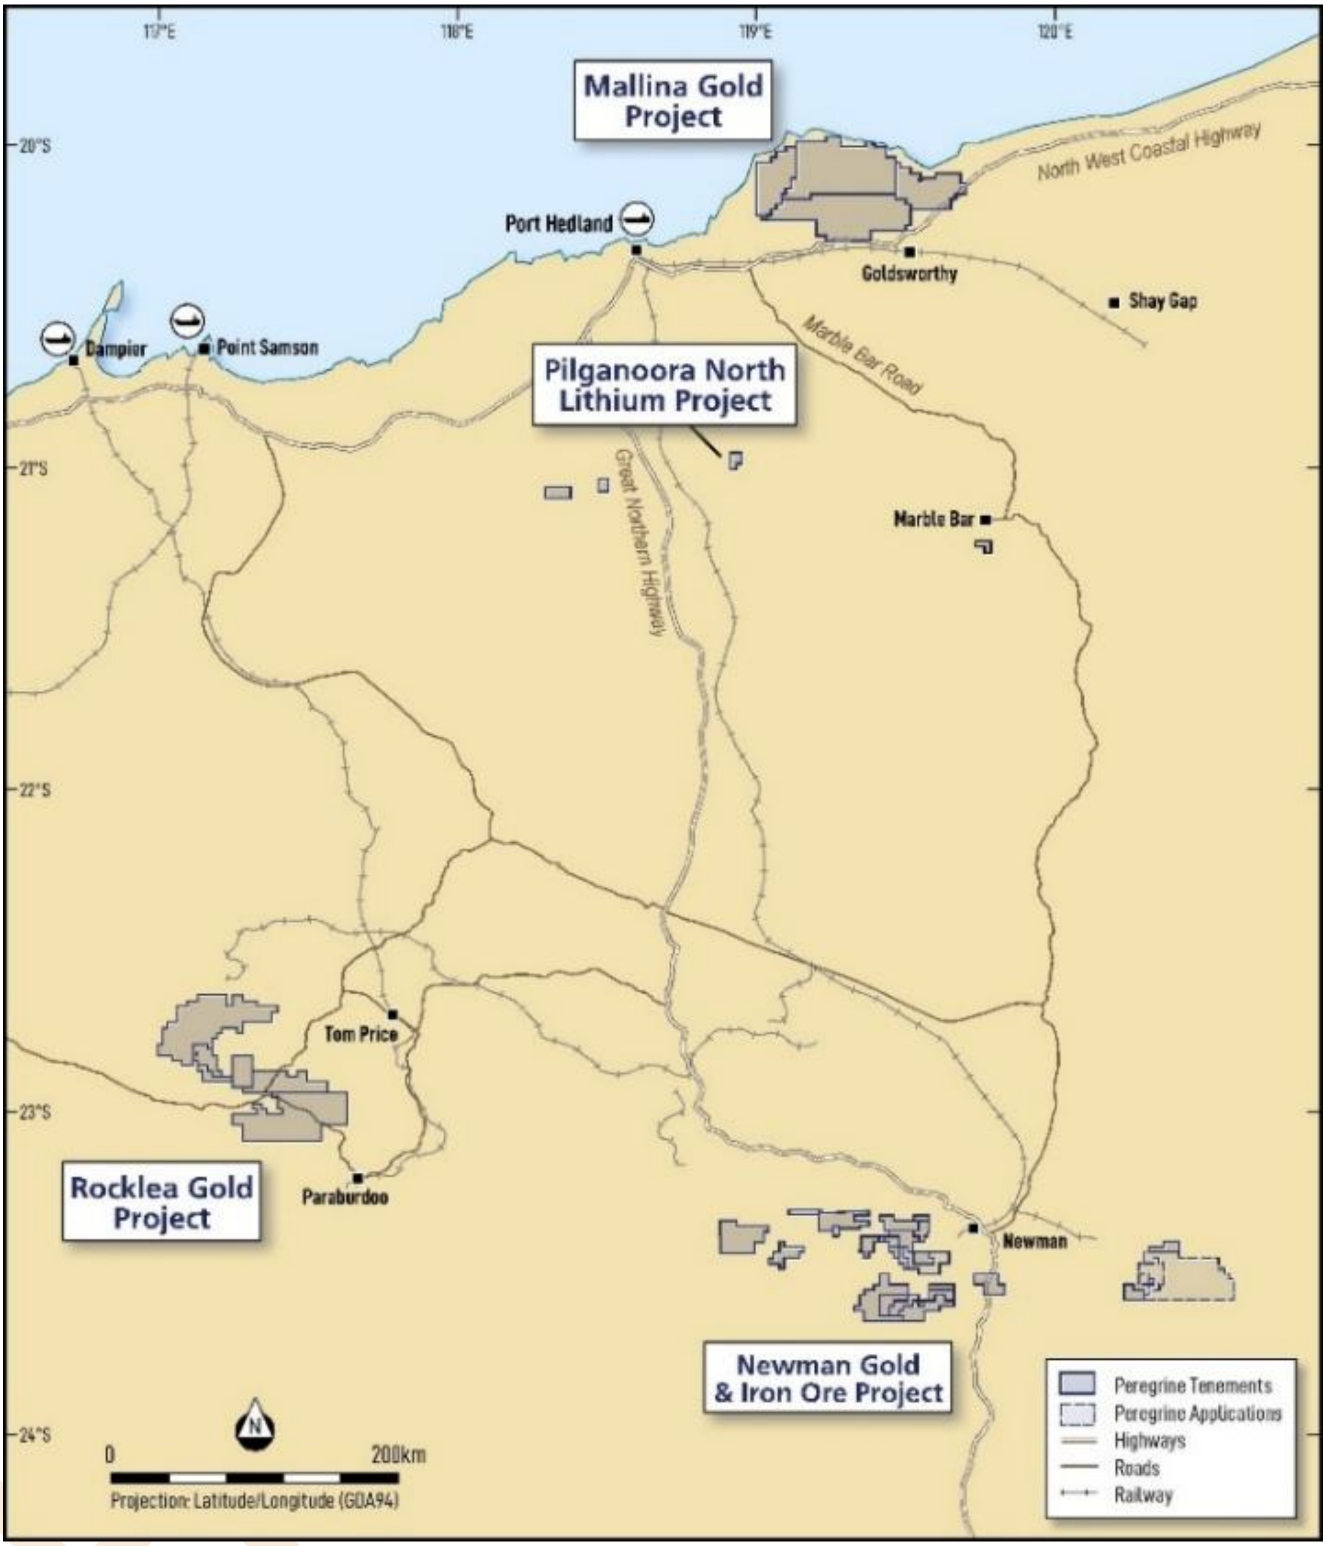

Figure 1: Peregrine Gold Limited Project Locations – Pilbara Region, Western Australia.

Newman Channel Iron Deposit ("CID") Prospects

In July 2025, the Company announced the discovery of the Coopers CID Prospect[1] ("Coopers"), a large-scale high-grade iron ore feature extending 6.4km in length and up to 200m in width and averaging approximately 57% Fe with low deleterious elements (Figure 2).

Due to the magnetic character of the Coopers CID, a detailed review of aeromagnetic data over the entire Newman Gold & Iron Ore Project was carried out to identify exposed or blind CID occurrences. After this review and following the inspection and sampling of some narrow mesa style CID outcrops in the Carneys Well area, the Company announced the discovery of a second high-grade CID Prospect ~6km to the southeast of Coopers named Carneys CID Prospect[2] ("Carneys). Complimentary to Coopers, Carneys represents another large-scale, high-grade CID target comprising up to 1.1km strike in outcrop averaging grades of 55% Fe, also with low level deleterious elements, with an additional 4.6km of strike inferred from magnetics under cover (Figure 3).

Both prospects are strategically located within several kilometres from BHP's world-class Western Ridge Project, approximately 13 km from Mt Whaleback, and 18 km from the town of Newman, positioning it within one of the most established iron-ore mining hubs globally.

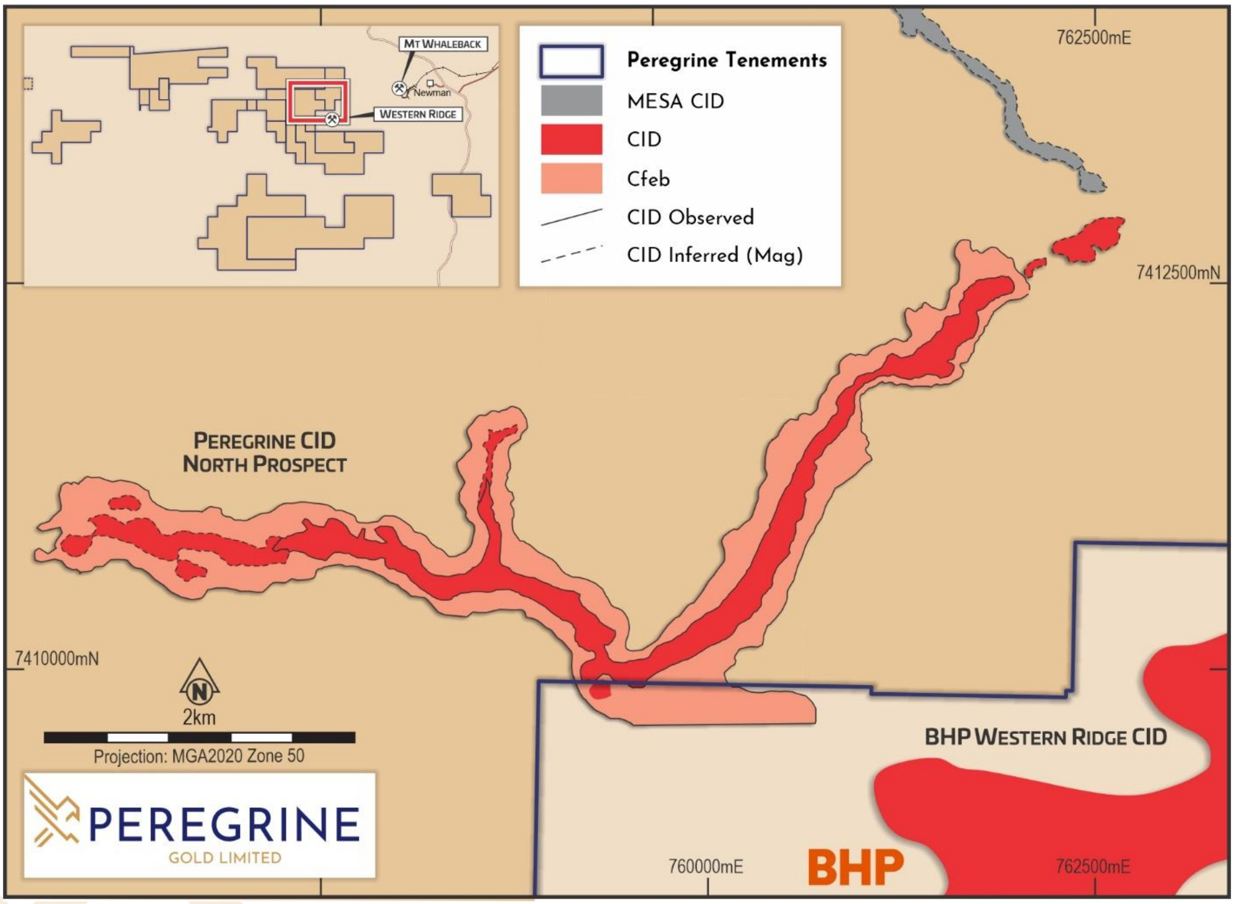

Figure 2: Coopers CID Prospect Relative to BHP Western Ridge.

[1] Refer ASX Announcement titled "High Grade Channel Iron Discovery" released 23 July 2025.
[2] Refer ASX Announcement titled "Second High-Grade CID Prospect Identified at Newman" released 26 November 2025.

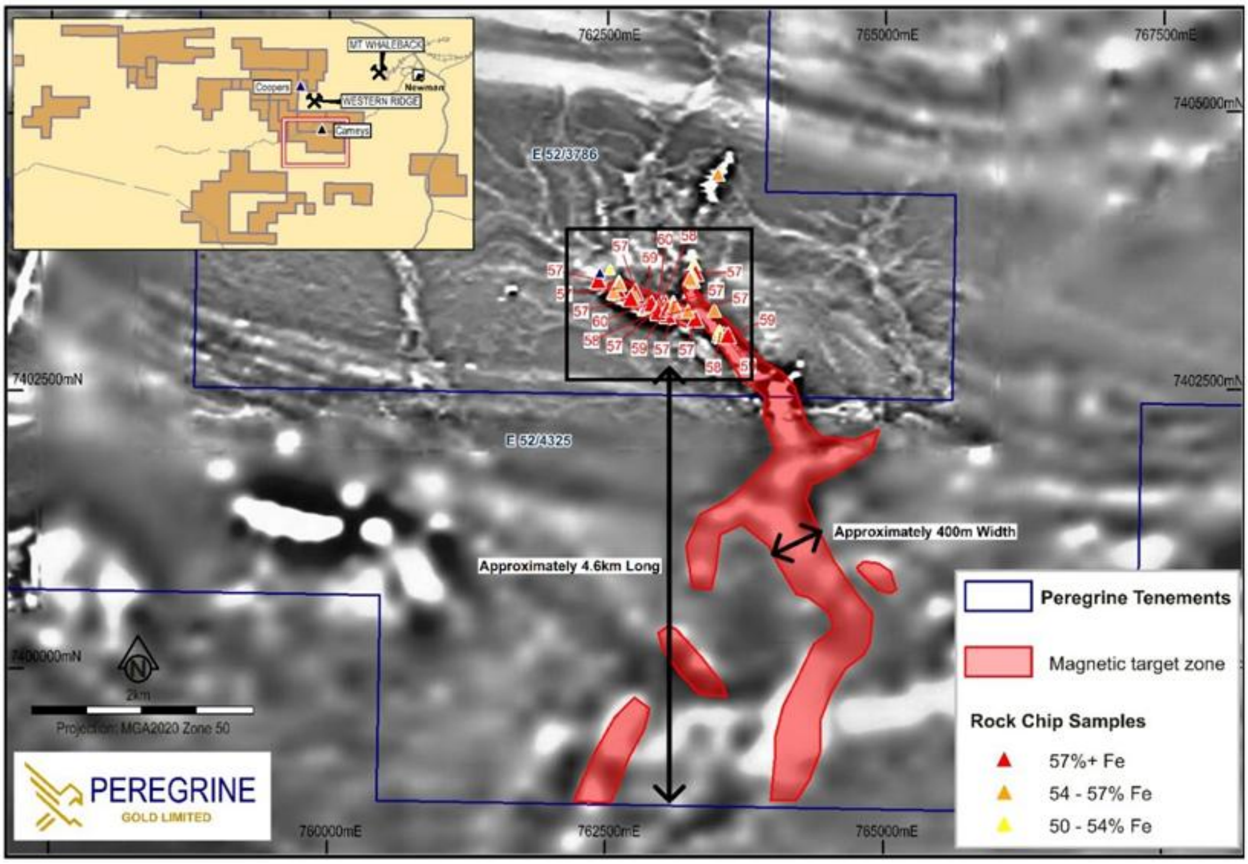

Figure 3: Carneys CID Prospect, with outcropping portion sampled and inferred (under cover) extension outlined in red.

Carneys CID Prospect

In March 2026, the Company confirmed it lodged a Programme of Work (“PoW”) with the Department of Mines, Petroleum and Exploration (“DMPE”) which has since been approved.

A heritage notice has also been sent to KNAC in order to schedule a heritage survey as soon as possible. Upon completion of the survey, the Company anticipates commencing a Reverse Circulation (“RC”) drilling programme to confirm the extent of the discovery.

Coopers CID Prospect

The Company also confirmed it lodged a PoW with the DMPE. The DMPE since advised that in forming its decision to grant the PoW, the Company would need to provide an Exploration Environmental Management Plan (EEMP) outlining strategies to avoid or minimise impacts to significant flora and fauna that may be present in the area. The Company engaged Onshore Environmental, a flora and fauna consultant who carried out a flora and fauna survey during March 2026.

In preparation for future RC drilling, a heritage notice has also been sent to the KNAC to request a heritage survey. Upon completion of the survey, the Company anticipates commencing a Reverse Circulation (“RC”) drilling programme to confirm the extent of the discovery.

Peninsula Special Prospecting Licence ("SPL") Agreement with Mark Creasy

In March 2025, the Company announced it had executed an agreement with prominent prospector and major shareholder Mark Creasy ("Agreement"). The Agreement permits the exploitation of gold within three Special Prospecting Licenses ("SPL") applied for over the Peninsula Prospect E52/3850 (Figure 4) located within the Company's Newman Gold & Iron Ore Project (Figure 1).

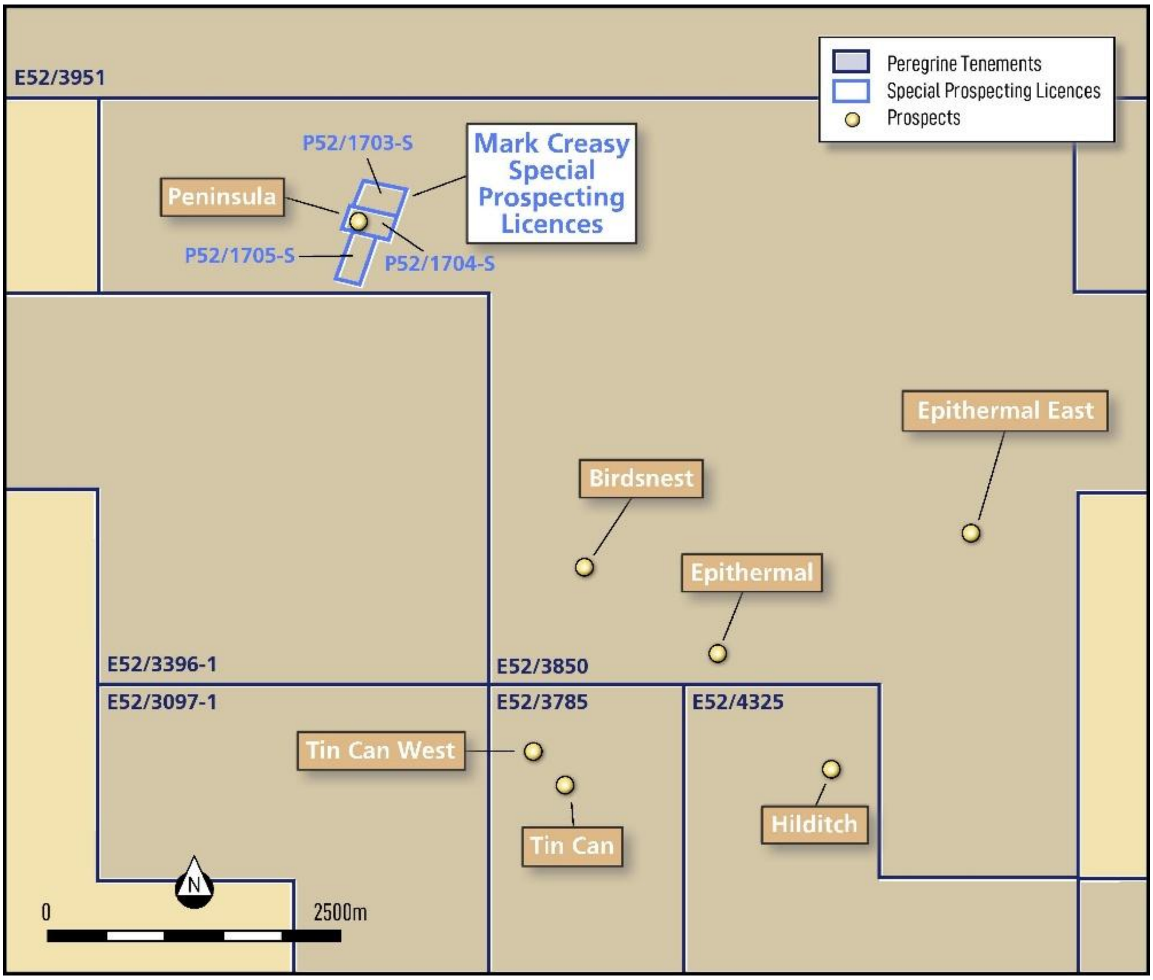

Figure 4: Location of Special Prospecting Licenses within the Peninsula Prospect - Newman Gold & Iron Ore Project.

The Company is pleased to advise that the Heritage Protection Agreement over the SPL's is in the latter stages of finalisation between Mark Creasy and the KNAC, with the expectation that full execution of the agreement will occur in the near future.

The SPL applications continue to advance through the regulatory process with grant expected in Q2 of the 2026 calendar year. The Company confirms it has received no information to indicate the SPL's will not be granted and looks forward to the exploitation of gold mineralisation over the SPL's upon their grant subject to heritage matters and approval of PoW's.

Rocklea Gold Project

During the quarter the Company announced it significantly expanded the Rocklea Gold Project with four new Exploration Licence applications to comprise six tenements in totality for approximately 1,250km^2. The Rocklea Gold Project is strategically located to the north, south and west of the Rocklea Dome and is dominated by the Hardey Formation, Bongal Formation and the Pyradie Formation within the Fortescue Group. Importantly a significant crustal structure known as the Karra Well Fault, transects the entire tenement package for approximately 60km in length. (Figure 5).

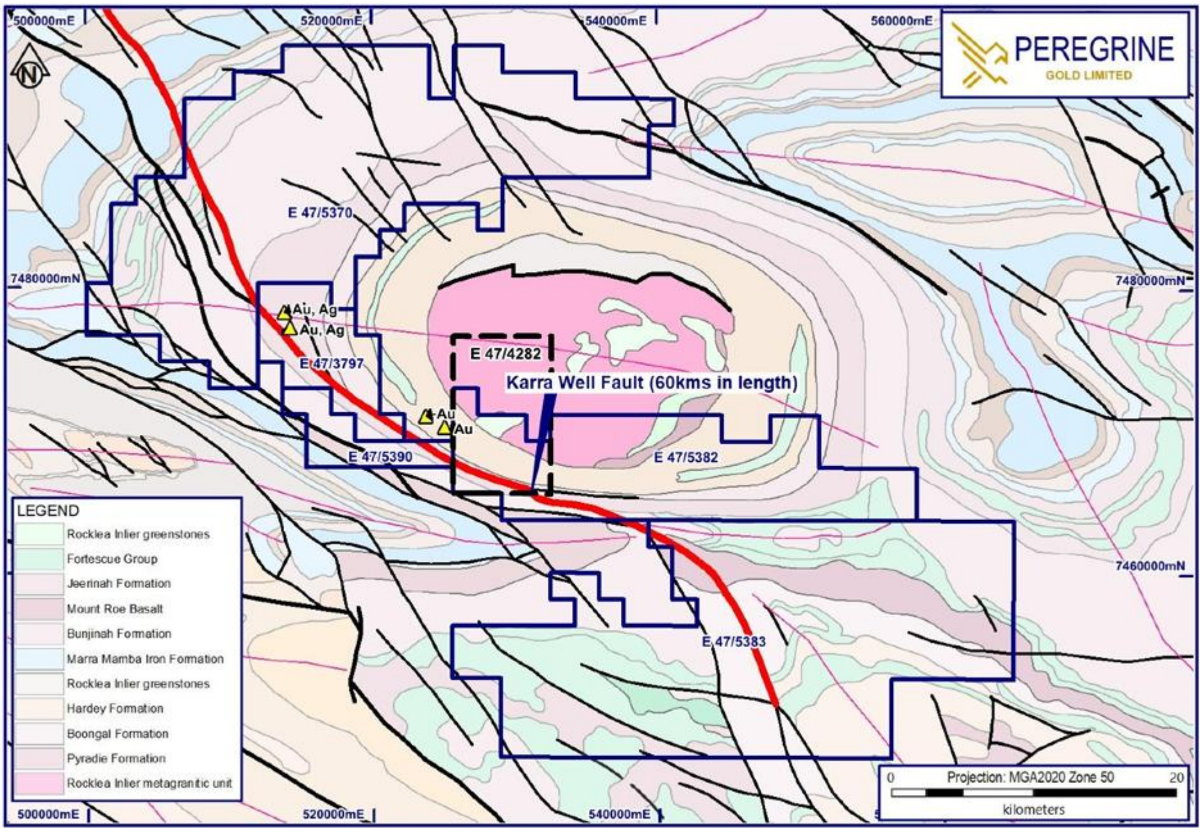

Figure 5: Rocklea Gold Project Interpreted Bedrock Geology with Regional Linear Structures with Peregrine EL's & ELA's in blue and dashed black.

The ground covered by the tenements which make up the Rocklea Gold Project have geological similarities to the Paulsens Gold Mine, a significant high grade gold operation which was placed on care and maintenance in 2017 by Northern Star Resources having produced over 900koz at an average grade of 7.3g/t Au*. More recently Paulsens was acquired by Black Cat Syndicate in June 2022 with production recommenced in December 2024 following an extensive near mine and regional exploration programme and is currently in ramp up phase producing a projected 9,500-11,000 ounces per quarter**.

The gold mineralisation at Paulsens occurs where a gabbroic sill transects a metasedimentary unit adjacent to WNW-NW fault structures. Gabbroic sills, metasedimentary units and WNW-NW fault structures are all present within the Rocklea Project area.

The Rocklea Gold Project is adjacent to the regionally significant Ninjilgardy Fault (Figure 6) which is a major crustal boundary. A number of significant gold deposits occur adjacent to the Ninjilgardy Fault, namely Black Cat Syndicate's Paulsens Gold Operations (>1m oz Au), Kalamazoo Resources Ashburton Project Mt Olympus (1.44m oz Au) and Capricorn Resources Karlawinda Project (>2.2m oz Au).

* Black Cat Syndicate Ltd (ASX:BC8) ASX Announcement 22 April 2022 "Funded Acquisition of Coyote & Paulsens Gold Operations – Supporting Information"
** Black Cat Syndicate Ltd (ASX:BC8) ASX Announcement 8 January 2026 "December 2025 Quarter – 100,000ozpa Run Rate Achieved"

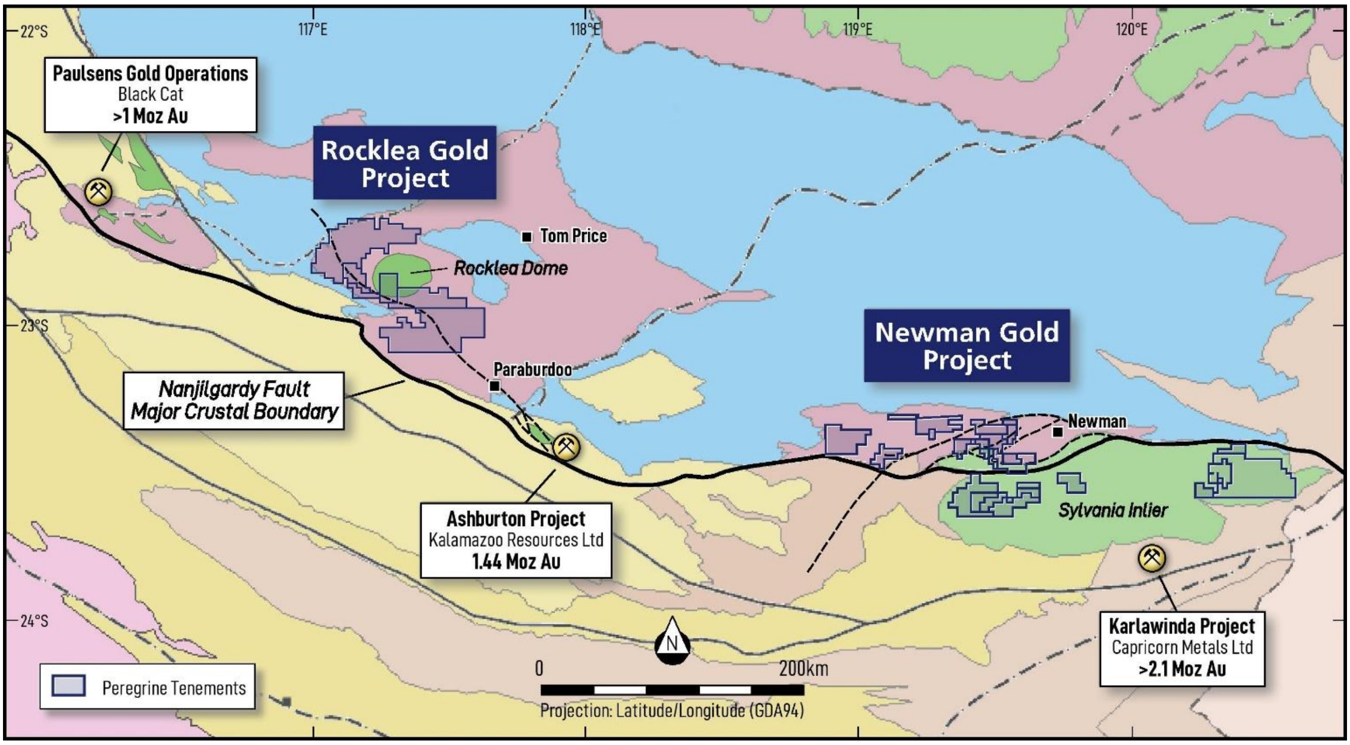

Figure 6: Ninjilgardy Fault - Major Crustal Boundary.

A Pastoral Access Deed is currently in negotiation with Rio Tinto, the owner of the Rocklea Pastoral Lease, to enable the Peregrine field crew to access the area covered by the new applications.

The exploration team carried out an orientation stream sediment and rock chip survey over the existing granted tenement under an existing pre agreed arrangement with the pastoral lease owner.

Pilgangoora North Lithium

As announced in March 2026, in 2022[3], the Company conducted reconnaissance stream sediment sampling over Exploration Licence E45/5775 predominately focussing on the lithium prospectivity. As part of the geochemical analytical protocol, all samples were analysed for 50 plus multi-elements, including gold.

In line with the strong market sentiment and tail winds toward precious metals, a desktop review of the 2022 stream sediment sample geochemical results was conducted in late 2025 focusing on the gold geochemistry.

As a result of the review, a follow up work programme is anticipated to commence in April 2026 to assess the anomalous gold in streams (Figure 7) and will include rock sampling and geological mapping.

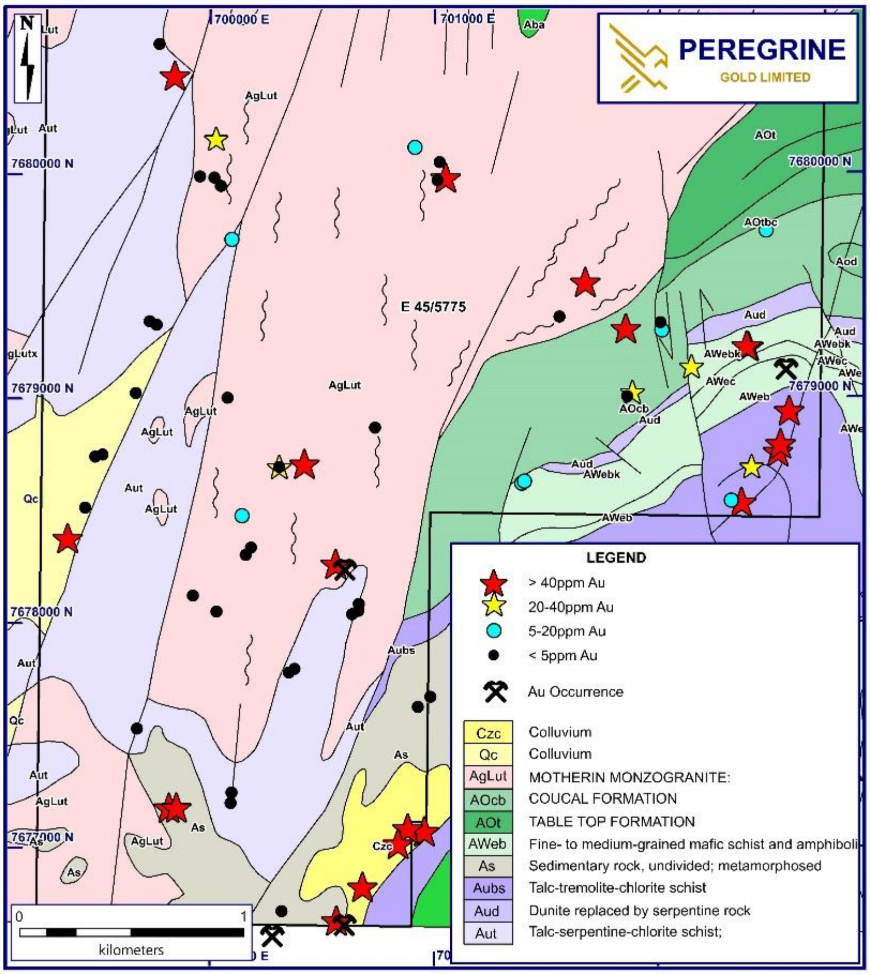

Figure 7: Pilgangoora North stream sediment gold assays with overlaying interpreted geology.

[3] Refer ASX Announcements titled “Pilgangoora North Lithium Project”, “Onground Exploration Commenced at Pilgangoora Lithium Project” and “Anomalous Lithium, Tantalum and Gold Identified at Pilgangoora North” released 25 March 2022, 6 October 2022 and 3 February 2023 respectively.

Mallina Gold Project

In August 2025, the Company, along with representatives of the Wanparta Aboriginal Corporation RNTBC ("WAC"), initiated a heritage survey at the Mallina Gold Project ("Mallina") (Figure 8).

Due to operational challenges and the ambitious nature of the programme the heritage survey did not cover all the planned targets. To progress Mallina, the Company is now planning to undertake a more limited programme over a different style of geological target that will be subject to PoW approvals, heritage surveys and cultural awareness training being undertaken by the Company and members of exploration team.

The Company remains committed to the Mallina Gold Project however at present, there is no clear timeline on conducting a drill programme.

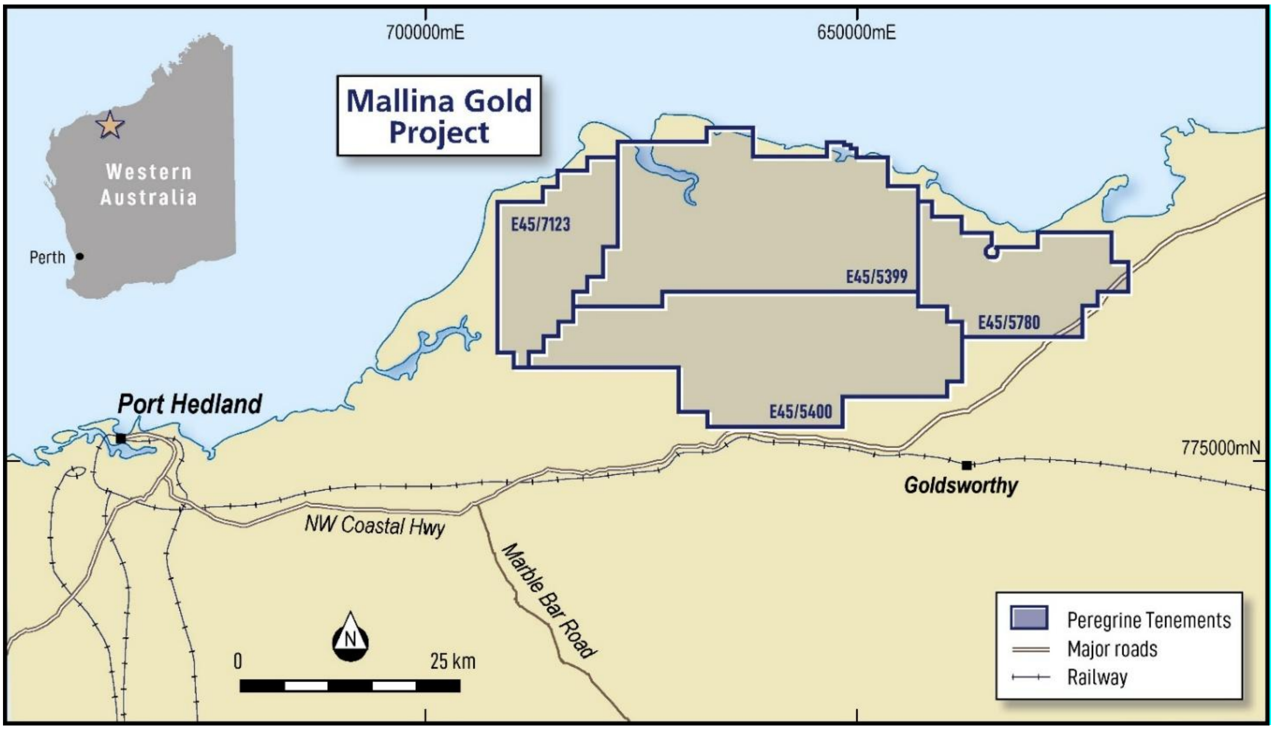

Figure 8: Mallina Gold Project tenement locations.

Newman Gold Exploration Prospects

Epithermal Prospect

In September 2025, following the completion of a 1,091m Phase 1 AC drilling campaign, the Company reported 4m composite assay results at the Epithermal Prospect which confirmed gold values in drilling significantly exceeded those measured in surface soils[4]. During the quarter, the results of gold anomalous 1m split samples were also received[5] confirming the results of the 4m composites with 1m intervals of importance highlighted in Figure 9 below.

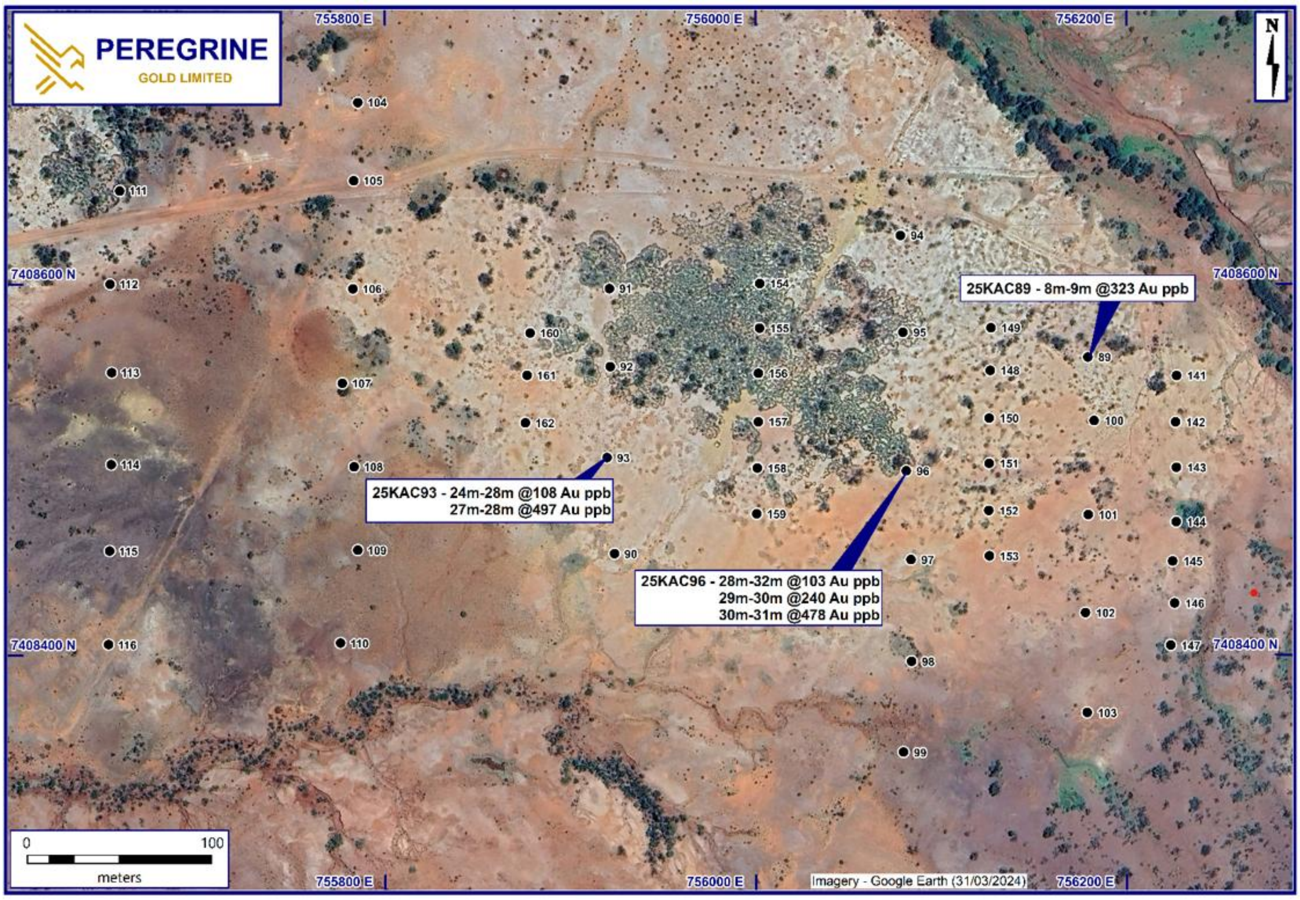

Figure 9: Epithermal Prospect – Significant 1m split sample assays from Phase 1 AC drilling programme.

To further investigate the uplift in gold anomalism seen in AC drilling as compared to surface sampling techniques, a Phase 2 AC drill campaign totalling of 982 metres (25KAC141-162) comprising 22 AC holes was subsequently completed in 2025. Similar to the results of Phase 1, there were often small amounts of quartz veining encountered with epithermal textures noted in many of those intervals.

Results from the Phase 2 campaign were also received during the quarter[5] and continue to confirm that epithermal veinlets are near surface, gold is present and there is evidence of base metal mineralisation (supporting the model of a magmatic source) as represented by the maximum elemental 4m composite results below:

[4] Refer ASX Announcement titled “Gold & Iron Ore Exploration Update” released 2 September 2025.
[5] Refer ASX Announcement titled “Exploration Update” released 4 March 2026.

Element	Max ppm
Au	0.139
Ag	3.6
Ba	1,897
Cu	743
Pb	2,642
Te	12.7
Zn	2,693

Table 1: Maximum 4m composite assays, per element, from Phase 2 AC drilling at the Epithermal Prospect.

Using the shallow AC results, RC drilling to depth (in order of ~200m) is being planned to investigate the epithermal system including high angle structures that may be present, including the more base metal rich areas.

Tin Can Prospect

In October 2025, the Company completed a 2,068m Phase 2 AC drilling campaign, comprising 24 holes (25KAC117-140) at the Tin Can Prospect. The aim of this programme was to further investigate multiple coherent, sub-parallel gold zones, shallowly dipping to the south and plunging to the south-east as identified from geological logging and previously reported 4m composite assays from Phase 1 drilling[5]. Gold anomalous 1m split assays from Phase 1 were also sent for analysis and have since demonstrated they are broadly in line with those previously reported[5].

Following receipt and interpretation of the Phase 2 AC drilling assays[5], the Company also reports the following maximum 4m composite assays:

Element	Max ppm
Au	1.74
Ag	1.21
As	388
Cr	3,683
Cu	689
Pb	70
Pd	55 ppb
Zn	199

Table 2: Maximum 4m composite assays, per element, from Phase 2 AC drilling at the Tin Can Prospect.

Phase 2 drilling data continues to show that low level gold is present in possibly several zones that appear to dip moderately and in a southerly direction. Within this zone, there appears to be a shoot direction toward the SSE across the plane in the overall data set where higher grade areas have been previously reported at Tin Can including several gold intersections at Tin Can West and two (including the new 4m @1.74 g/t Au this programme) to the SE of Tin Can near the conglomerate contact. The remaining results are low tenor consistent with previous drilling.

Consideration of further work includes a small RC Drilling programme of 3-4 holes to depths around 200m to ascertain the depth to fresh rock and look to intersect the down dip extension of the gold zone.

[5] Refer ASX Announcement titled “Exploration Update” released 4 March 2026.

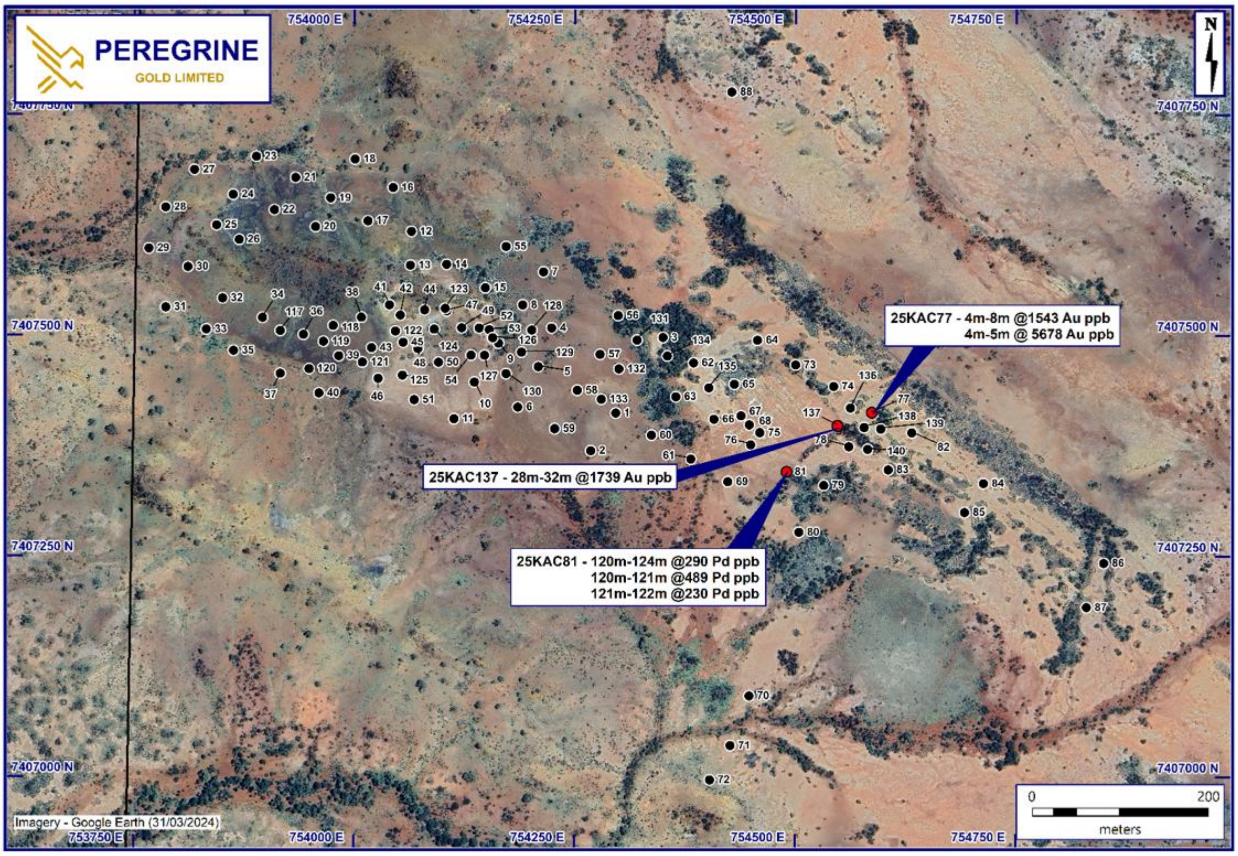

Figure 10: Tin Can Prospect – Significant 1m split sample assays from Phase 1 and 4m composites from Phase 2 AC drilling programme.

Upcoming Results and Future Works Programmes

- Further mapping, sampling and CID target generation activities within the broader Newman Gold & Iron Ore Project;
- RC drill testing at Carneys CID subject to heritage survey;
- RC drill testing at Coopers CID, subject to heritage survey;
- Ongoing orientation stream sediment and rock chip sampling at the Rocklea Gold Project;
- RC drill planning at Tin Can and Epithermal Prospect; and
- Exploitation of gold mineralisation over the Peninsula Prospect SPL's following their grant which remains subject to heritage matters.

COMPETENT PERSONS STATEMENT

The Information in this Report that relates to previously released Exploration Results for the Newman Gold & Iron Ore Project is extracted from Peregrine Gold Limited's ASX announcements titled "High Grade Channel Iron Discovery - Amendment" released on 23 July 2025, "Second High-Grade CID Prospect Identified at Newman" released on 26 November 2025, "Gold & Iron Ore Exploration Update" released 1 September 2025, "Tin Can Gold Discovery Expands Scale" released 26 August 2025 and "Exploration Update" released on 4 March 2026, which is available on https://www.peregrinegold.com.au/investors/asx-announcements/.

The Information in this Report that relates to previously released Exploration Results for the Pilgangoora North Lithium Project is extracted from Peregrine Gold Limited's ASX announcements titled "Pilgangoora North Lithium Project" released 25 March 2022, "Onground Exploration Commenced at Pilgangoora Lithium Project" released 6 October 2022 and "Anomalous Lithium, Tantalum and Gold Identified at Pilgangoora North" released 3 February 2023 and "Exploration Update" released on 4 March 2026, which is available on https://www.peregrinegold.com.au/investors/asx-announcements/.

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and that all material assumptions and technical parameters underpinning the estimates or production targets or forecast financial information derived from a production target (as applicable) in the relevant market announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's (Technical Director – George Merhi) findings are presented have not been materially modified from the original market announcements.

FORWARD LOOKING STATEMENTS

Statements regarding plans with respect to Peregrine's project are forward-looking statements. There can be no assurance that the Company's plans for development of its projects will proceed as currently expected. These forward-looking statements are based on the Company's expectations and beliefs concerning future events. Forward looking statements are necessarily subject to risks, uncertainties and other factors, many of which are outside the control of the Company, which could cause actual results to differ materially from such statements. The Company makes no undertaking to subsequently update or revise the forward-looking statements made in this announcement, to reflect the circumstances or events after the date of that announcement.

This ASX Announcement has been approved in accordance with the Company's published continuous disclosure policy and authorised for release by the Company's Board.

Appendix 1: Disclosures in accordance with ASX Listing Rule 5.3

Summary of Mining Tenements

As at 31 March 2026, the Company has an interest in the following projects:

Project Name	Permit Number	Percentage Interest	Status
Newman Gold & Iron Ore Project, Western Australia	E47/4311	100%	Granted
	E52/2933	100%	Granted
	E52/3097	100%	Granted
	E52/3370	100%	Granted
	E52/3396	100%	Granted
	E52/3570	100%	Granted
	E52/3783	100%	Granted
	E52/3785	100%	Granted
	E52/3786	100%	Granted
	E52/3826	100%	Granted
	E52/3828	100%	Granted
	E52/3850	100%	Granted
	E52/3911	100%	Granted
	E52/3951	100%	Granted
	E52/3952	100%	Granted
	E52/3953	100%	Granted
	E52/4008	100%	Granted
	E52/4009	100%	Granted

	E45/5780	100%	Granted
	E45/7123	100%	Application

Egina, Pilbara, Western Australia	E47/3812	40%	Granted
Rocklea Gold Project, Pilbara, Western Australia	E47/3797	100%	Granted
	E47/4282	100%	Application
	E47/5370	100%	Application
	E47/5382	100%	Application
	E47/5383	100%	Application
	E47/5390	100%	Application
Comet East, Pilbara, Western Australia	E45/7048	100%	Application
Pilgangoora North, Western Australia	E45/5775	100%	Granted
Kangan West, Pilbara, Western Australia	E47/4922	100%	Granted

Changes during the period

There were no granted tenements during the March quarter however a new application was submitted for E47/5390 regarding the Newman Gold & Iron Ore Project in conjunction with the acquisition of several Rocklea Gold Project applications including E47/4282, E47/5370, E47/5382, E47/5383 and E47/5390 as announced in February 2026.

Tenement E52/3755 was also surrendered pertaining to the Newman Gold & Iron Ore Project.

Summary of Mining Exploration Activities Expenditure

The Company spent ~$0.33m, on exploration during the quarter, with the majority of the cash outflow directed toward exploration activities at the Newman Gold & Iron Ore Project as described above in the Quarterly Activities Report.

There were no mining or production activities or expenses incurred during the quarter ended 31 March 2026.

Related Party Payments

During the quarter ended 31 March 2026, the Company made payments of $130,414 to related parties and their associates. Pursuant to the arrangements disclosed in the 2025 Annual Report, the amounts comprise $25,480 in Director fees and superannuation, $52,250 in corporate and advisory consulting fees and $52,685 for expensed exploration field activities of which $13,985 are for reimbursements.

All amounts shown GST Exclusive.

7.5	**Unused financing facilities available at quarter end**	-

7.6 Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.

Not applicable

8.	Estimated cash available for future operating activities	$A'000
8.1	Net cash from / (used in) operating activities (item 1.9)	(469)
8.2	(Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	-
8.3	Total relevant outgoings (item 8.1 + item 8.2)	(469)
8.4	Cash and cash equivalents at quarter end (item 4.6)	2,705
8.5	Unused finance facilities available at quarter end (item 7.5)	-
8.6	Total available funding (item 8.4 + item 8.5)	2,705
8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	5.77

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer: Not applicable

8.8.2	Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?
Answer: Not applicable	
8.8.3	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?
Answer: Not applicable	
Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.	

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 30 April 2026

Authorised by: The Board

(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's Corporate Governance Principles and Recommendations, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating.
