ASX RELEASE

Completion of Sunrise Bore Project Acquisition and First Phase Drilling to Commence Today

Platina Resources Limited (ASX: PGM) ("Platina" or "the Company") advises that it has completed the acquisition of the Sunrise Bore Project through the acquisition of Bravo Minerals Pty Ltd ("Bravo"). A phase one drilling program will commence today designed to test a section of the 1.2km historically identified mineralised trend in the 3.6km structural corridor.

Settlement has been completed in accordance with the terms announced on 17 June 2026, with Platina acquiring a 100% interest in Exploration Licence E38/4038, located within the highly prospective Mt Morgans gold district near Laverton, Western Australia.

As consideration for the acquisition, Platina has:

- Paid $350,000 in cash (including the previously paid $50,000 deposit);
- Issued 40,625,307 fully paid ordinary shares in Platina, valued at $800,000; and
- Granted a 1% Net Smelter Return (NSR) royalty.

The Sunrise Bore Project is located within a highly prospective gold exploration corridor in the Eastern Goldfields region of Western Australia (Figure 1). The tenement covers an area that has seen limited modern exploration and is considered highly prospective for structurally controlled gold mineralisation, providing Platina with an opportunity to expand its Laverton gold exploration portfolio.

Platina has recently completed a detailed technical review of the project, secured the necessary cultural heritage clearances and a Phase 1 reverse circulation (RC) drilling program comprising 23 holes for approximately 2,775 metres (Figure 2) will commence today. The program will target zones of historical gold mineralisation within a 0.25km section of the broader 1.2km mineralised trend.

Platina Chief Executive Officer, Mr Corey Nolan, said the Sunrise Bore Project had the potential to rapidly advance towards a mineral resource through systematic drilling aimed at extending known mineralisation along strike and down dip.

“With no modern exploration undertaken at Sunrise Bore since 1998, we believe there is a significant opportunity to unlock value at the project. The combination of historical mineralisation, limited recent exploration, and proximity to infrastructure and multiple processing facilities makes Sunrise Bore a compelling addition to our Laverton exploration portfolio," Mr Nolan said

The initial phase of drilling is expected take approximately 14 days to complete.

This announcement was authorised by the Platina Resources Limited Board of Directors.

DISCLAIMER

Statements regarding Platina Resources' plans with respect to its mineral properties are forward-looking statements. There can be no assurance that Platina Resources' plans for development of its mineral properties will proceed as currently expected. There can also be no assurance that Platina Resources will be able to confirm the presence of additional mineral deposits, that any mineralisation will prove to be economic or that a mine will successfully be developed on any of Platina Resources' mineral properties.

ABOUT PLATINA RESOURCES LIMITED (ASX: PGM)

Platina is an Australian-based company focused on advancing early-stage metals projects through exploration, feasibility, and permitting towards development. Shareholder value is created by monetising the projects through either sale, joint venture or development.

Platina controls a 100% interest in a portfolio of gold projects in the Yilgarn Craton in Western Australia. For more information please see: www.platinaresources.com.au
