Disclaimer and Safe Harbour

Certain statements made in this document are forward-looking statements within the meaning of the safe harbor provisions of the United States Private Securities Litigation Reform Act of 1995. These forward-looking statements are not historical facts but rather are based on the current expectations of Prescient Therapeutics Limited ("Prescient" or the "Company"), their estimates, assumptions, and projections about the industry in which Prescient operates. Material referred to in this document that use the words 'estimate', 'project', 'intend', 'expect', 'plan', 'believe', 'guidance', and similar expressions are intended to identify forward-looking statements and should be considered an at-risk statement. These forward-looking statements are not a guarantee of future performance and involve known and unknown risks and uncertainties, some of which are beyond the control of Prescient or which are difficult to predict, which could cause the actual results, performance, or achievements of Prescient to be materially different from those which may be expressed or implied by these statements. These statements are based on our management's current expectations and are subject to a number of uncertainties and risks that could change the results described in the forward-looking statements. Risks and uncertainties include, but are not limited to, general industry conditions and competition, general economic factors, the impact of pharmaceutical industry development and health care legislation in the United States and internationally, and challenges inherent in new product development. Investors should be aware that there are no assurances that results will not differ from those projected and Prescient cautions shareholders and prospective shareholders not to place undue reliance on these forward-looking statements, which reflect the view of Prescient only as of the date of this presentation. Prescient is not under a duty to update any forward-looking statement as a result of new information, future events or otherwise, except as required by law or by any appropriate regulatory authority.

Certain statements contained in this document, including, without limitation, statements containing the words "believes," "plans," "expects," "anticipates," and words of similar import, constitute "forward-looking statements." Such forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause the actual results, performance or achievements of Prescient to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Such factors include, among others, the following: the risk that our clinical trials will be delayed and not completed on a timely basis; the risk that the results from the clinical trials are not as favorable as we anticipate; the risk that our clinical trials will be more costly than anticipated; and the risk that applicable regulatory authorities may ask for additional data, information or studies to be completed or provided prior to their approval of our products. Given these uncertainties, undue reliance should not be placed on such forward-looking statements. The Company disclaims any obligation to update any such factors or to publicly announce the results of any revisions to any of the forward-looking statements contained herein to reflect future events or developments except as required by law.

This document may not contain all the details and information necessary for you to make a decision or evaluation. Neither this document nor any of its contents may be used for any other purpose without the prior written consent of the Company. Nothing in this document should be considered financial advice. Please consult your professional investment adviser who understands your risk appetite and financial objectives before considering an investment in Prescient.

Share Price ¹	A\$0.059
Market Capitalisation¹	A\$58 M
Cash Position²	A\$11.9M
Top 20 Own	21%

1. As at 10 March 2026
2. As at 31 March 2026 (4C)

Our Focus

Bringing new hope
to people with cancer

Pioneering a therapeutic
approach with the
potential to address
~1 in 5 cancers

Creating value
for both investors
and patients

Our unique value proposition

First-in-class approach to a proven pathway

Pioneering technology

- PTX-100 is the most advanced selective GGTase-1 inhibitor currently in clinical development¹
- Platform opportunity: Biology targeted is implicated in approximately 22% of cancers²

First disease target (CTCL) delivering strong data

- One of the most advanced cancer therapies on the ASX
- Efficacy signals seen in Phase 1b results
- Of the patients treated and assessable, all showed clinical benefit with either having tumours reduced or halted
- FDA granted key designations to support market exclusivity, reduced costs and faster review
- Clinical data generated to date may support future partnering discussions

1. Based on public data

2. The RAS Problem: Turning Off a Broken Switch - NCI : Clinical applicability beyond CTCL remains unproven

Background

What causes cancerous mutations?

Normal
cell growth

Normal cell

Cell division

Healthy tissue

Abnormal
cell growth

Normal cell

Genetic changes

Cancerous cell division
**Mediated by
the RAS family**

Malignant tumour

PTX-100 technology highlights

Yale

PTX-100 is licensed from Yale University

First-in-class drug candidate:
Most advanced against its target in clinical development¹

Inhibits the enzyme GGTase-1, crucial to the RAS pathway

- RAS proteins are among the highest priority targets in cancer drug development
- Mutations in RAS proteins drive the development and worsening of many cancers
- GGTase-1 has broad control over the activity of many proteins in the RAS pathway

1. Per public data.

Placeholder: How PTX-100 works

RAS proteins can drive overgrowth of cells through many signaling pathways, regulated by GGTase-1

PTX-100 blocks GGTase-1, broadly inhibiting RAS proteins signaling

First-in class advantages

First and only GGTase-1 inhibitor to reach clinical development¹

This position potentially allows Prescient to:

Eligibility for favorable regulatory designations that may support expedited development timelines²

Move through development without competing against other GGTase-1 inhibitor data benchmarks

Build a strong 'first to market' brand with physicians if approved

Potentially extend first-mover advantage against other cancers (relevant biology is involved in 1 in 5 of all cancers)

1. Based on public data
2. Subject to regulatory approval

A differentiated mode of action

*Currently in development

PTX-100 for CTCL

Strategy and data

First indication chosen for:

- Strong RAS involvement
- High unmet need
- Strong chance of regulatory support
- Significant addressable market
- Moderate or low competition

Selection made: CTCL

- RAS family involvement
- Orphan disease
- Advanced stages currently seen a death sentence: existing therapies not effective/safe enough
- Estimated \$1.2 billion US market in 2034¹

Outcomes so far:

- **Phase 1b results: 100% clinical benefit² (including stable disease) and no drug-related serious adverse effects observed to date**
- **Received FDA's Fast Track and Orphan Drug designations for the US and EU**

1. DelveInsight: Market Insight, Epidemiology And Market Forecast – 2034

2. CTCL subgroup, n=7 evaluable patients

CTCL patients face a high unmet medical need

Poor outcomes in advanced stages

Significant impact on quality of life

- Pruritus (itching)
- Secondary infections
- Appearance impacted by skin involvement
- Sleep disturbance and fatigue

CTCL has limited effective treatment options

- A rare type of cancer of white blood cells (T cells), normally involved in immune function
- These cancerous T cells are present in the skin, where they divide uncontrollably, attacking the skin and eventually impacting nodes and viscera and blood
- Current treatment options for later stage disease are limited by modest efficacy and poor durability, with few patients achieving sustained responses
- High toxicity burden across available systemic therapies restricts long-term use
- Limited options for patients with relapsed or refractory CTCL
- Orphan disease: 3,000¹ new cases in US each year and increasing

CTCL Clinical Data

Phase 1b with sub-analysis of CTCL patient cohort

Response rates, safety and duration are key drivers

	Benchmark ¹	Lymphir ^{2,3}	PTX-100 (Phase 1B) ⁴	PTX-100 (CTCL only) ⁵
Response Rate	30%	36%	45%	43%
Clinical Benefit Rate	45%	NA	64%	100%
Duration of Response	9-13 months CTCL 3-4 Months PTCL	6.5 months (CTCL)	10.7 months	12.4 months
Serious Adverse Events	<30%	38%	0% ⁶	0% ⁶

Comparisons shown are not from head-to-head studies. Differences in trial phase, patient population, endpoints, and study design may materially affect outcomes.

1. Considered a target benchmark by Prescient and its investigators, with reference to currently available therapies in r/r TCL. Clinical Benefit rate includes: complete and partial response and stable disease

2. Label as per FDA.gov; Fierce Pharma; EF Hutton report

3. Approved by the FDA 8 Aug 2024: LYMPHIR is an IL2-receptor-directed cytotoxin indicated for the treatment of adult patients with relapsed or refractory Stage I-III cutaneous T-cell lymphoma (CTCL) after at least one prior systemic therapy.
4. 11 evaluable patients

5. 7 evaluable patients

6. Serious Adverse events that were treatment related

PTX-100: Favourable safety profile compared to peers

Recommended CTCL drugs have challenging safety profiles, with adverse events occurring in up to 70% of patients

PTX-100 has a favourable safety profile

- Data from completed early studies show no serious adverse events deemed related to PTX-100
- Suits fragile patient population
- Good candidate for combination therapy

Sugaya M. Int.J.Mol.Sci. 2021

Progressing PTX-100 Through Phase 2

Multicenter clinical trial

3

5

3

4

- Phase 2a: N=40 pts with r/r CTCL (dose optimisation)
- Phase 2b: N=75 pts with r/r CTCL will be treated at the recommended dose from Phase 2a
- Involving international experts in CTCL treatment

PTX-100 (CTCL): Status

PTX-100 (CTCL): Proposed approach

Total addressable market

High unmet need = large market opportunity

US market for CTCL

- 3000¹ new CTCL cases per year in the US
- Estimated US CTCL market size of approximately ~US\$1.2bn / year by 2034²

1. JAMA Oncology.2022 Sep1;8(11):1690–1692.doi:10.1001/jamaoncol.2022.3236

2. Based on third party forecasts and subject to assumptions regarding pricing, treatment duration, competition and reimbursement. DelveInsight: CTCL Market Insight, Epidemiology And Market Forecast – 2034

New entrants for CTCL can grow the market

CTCL US Market 2020 to 2025¹ (US\$M)

Early results position PTX-100 well against current therapies

- Enable market share growth
- Unique MOA supports combination opportunities
- Treatment duration
- Pricing comparisons

1. DelveInsight: CTCL Market Insight, Epidemiology And Market Forecast – 2034

Mogamulizumab was FDA Approved in 2018 in R/R mycosis fungoides (MF) or Sézary syndrome (SS) after at least one prior systemic therapy

60% Patient growth from entry of mogamulizumab from 2020 to 2024 in DelveInsight data for second line Early and Advanced stage CTCL in the US

CTCL program

Summary

	PTX-100 (Phase 1B) ¹	PTX-100 (CTCL only) ²
Response Rate	45%	43%
Clinical Benefit Rate	64%	100%
Duration of Response	10.7 months	12.4 months
Serious Adverse Events	0% ³	0% ³

- Phase 1B results exceed benchmarks and existing drugs
- Allows for new indications with PTX-100 to go straight into Phase 1b/2a
- FDA support
- US\$1.2bn focus market⁴ for CTCL
- Currently in Phase 2a: potential for 2b registration study

1. 11 evaluable patients

2. 7 evaluable patients

3. Serious Adverse events that were treatment related

4. DelveInsight: CTCL Market Insight, Epidemiology And Market Forecast – 203

PTX-100's Wider Platform Opportunity

Major expansion opportunity with PTX-100

RAS pathway alterations are reported in ~ 22% of cancers

- Underlying biology targeted is relevant to 1 in 5 cancers
- Potential to progress future indications into Phase 1b or 2a¹

¹. Subject to preclinical and regulatory review
MA = Marketing Authorization

Expansion strategy

Stage 1: CTCL-centric

- ✓ Demonstrate efficacy & safety
 - Potentially partner the asset
- ✓ FDA support (ODD, FTD)
 - Complete phase 2b registrational study
 - CTCL commercial pathways

Stage 2: Expansion

- Bring new indications onto platform
- Progressively address further cancers
- Strategic commercial pathways
