ASX Announcement

Further Soil Sampling Underway at Srebrenica North

Highlights

- Phases 2 and 3 soil sampling have commenced at Srebrenica North, following the successful completion of Phase 1 soil sampling (ASX Ann 15.06.2026)
- These Phases are designed to investigate broader areas of the Dolovi tenement, and initial priority are on the Vagan tenement
- Combined with ground magnetic survey currently underway (ASX Ann 05.08.2026), systematic early stage exploration will assist in generating and prioritising drill targets

Regener8 Resources NL (**ASX: R8R**) (**Regener8** or the **Company**) is pleased to advise the commencement of further soil sampling on the Srebrenica North project (**Project**), following the recently completed Phase 1 soil sampling campaign.

Regener8 Managing Director, Stephen Foley, comments:

"Having completed Phase 1 fieldwork in June, we have moved straight into Phases 2 and 3 to build coverage across the Dolovi and Vagan tenements. The program is infilling the ground around Zanik and Chaush prospects, where medieval workings and Yugoslav-era exploration point to a polymetallic system that has never been tested with modern methods. Establishing our in-country team in Bosnia and Herzegovina has been central to that pace: it gives us people on the ground who can plan, mobilise and execute without delay.

Running the soil geochemistry and the ground magnetic survey concurrently is a deliberate choice. It gives us two independent datasets over the same ground, and combined with field mapping that is what allows us to define and rank drill targets with confidence rather than chasing individual anomalies. With Phase 1 assays pending, we expect to be in a position to prioritise those targets as the results come together."

Soil Program Phases

The soil sampling campaign aims to analyse chemical trace elements in surface material to identify potential ore bodies and map subsurface rock lithology before more costly drilling or development work is undertaken. The soil sampling program at the Srebrenica North Project comprises four sequential phases.

Phases 1 and 3 target areas with known mineral occurrences and historical workings across the Dolovi and Vagan tenements, respectively, using nominal 100m spacing along ridgelines. Phases 2 and 4 target areas without known mineral occurrences or historical workings, using nominal 200m spacing.

Phase 1 has been completed and is awaiting assay results, Phases 2 and 3 are underway, and Phase 4 is scheduled to commence.

The Company looks forward to updating the market as exploration progresses.

Relevant ASX Announcements:

- 5 August 2026 – Ground Magnetic Survey Underway at Srebrenica North
- 15 June 2026 – Maiden Soil Sampling Completed at Srebrenica North
- 31 March 2026 – Srebrenica North Historical Results

With respect to the above announcements and exploration results in this release, R8R confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

This ASX Announcement has been authorised for release by the Board.
