MOVING TOWARDS TUNGSTEN PRODUCTION

METALLURGICAL TESTWORK[1]

- Highly marketable WO_3 concentrate with a 48% grade and 45% recovery
- Simple flowsheet that successfully separates both gold and scheelite with minimal losses (<1 %) of gold to the scheelite (WO_3) concentrate
- The scheelite gravity flowsheet can be designed as a simple 'bolt-on' processing facility which could be integrated into an existing gold plant
- Discussions have commenced with mineral processing specialists Sepro with the aim of evaluating modular, low-cost gravity processing equipment for a rapid development option

NEXT STEPS

- Further metallurgical testwork to prepare concentrate marketing samples
- Complete scoping study on mining and processing WO_3 material from Western Queen South which could be mined concurrently with the gold mineralisation
- Continue discussions with potential WO_3 concentrate off-take partners
- Fast track tungsten production - with global tungsten prices soaring by over 500% in the last year, aim is to fast-track into production to capture this historic market upside

WHY WE LIKE MUNARRA GULLY

The Amaryllis prospect is early stage with 2,600m of mineralised strike, open in all directions.

Recent interpretation of historical drilling revealed most was ineffective and often not reaching fresh rock.

RECENT DRILLING AT AMARYLLIS[1]

Latest RC drilling returned:

- **13m @ 21.64g/t Au from 122m**
    - **incl. 5m @ 55.56g/t Au from 124m**
    - **incl. 1m @221.0g/t Au from 124m**

WHY WE LIKE THUNDERSTORM

Gazelle and Pion have similar characteristics to the palaeochannel/placer gold deposits of Higginsville and Kanowna

Shallow gold mineralisation with high-grade zones at Gazelle point to a potential proximal high-grade basement source

GAZELLE DISCOVERY[1]

Wide spaced AC drilling on 1,500m traverses in 2019 returned high-grade paleo channel gold mineralisation including:

- **16m @ 6.69g/t Au from 42m**
- **6m @ 9.15g/t Au from 48m**

PION DISCOVERY[1]
