SciDev secures initial Data Centre market contracts

SciDev Ltd (ASX:SDV) (“the Company”) is pleased to announce it has secured its first contracts into the data centre market. The scope of work includes design, consulting and embedded engineering services across two of Australia’s largest hyperscale data centre operators and developers, which provide colocation solutions for cloud, content, and enterprise customers¹. The contracts are anticipated to generate ~\$0.5 million in revenue during 1H FY27, with potential for the scope and duration of services to expand in the future.

Highlights

- Initial contracts secured across two separate data centre developers and operators, marking SciDev’s first revenue generating work in the data centre market.
- Scope of work includes development consultation services for a large-scale data centre project and embedded engineering support for one of Australia’s largest data centre developers and operators.
- The contracts are anticipated to generate ~\$0.5 million in revenue during 1H FY27.
- The awards provide early reference work in a market identified by SciDev as a key growth priority, anchored on water recycling, reuse and advanced treatment solutions.

Todd Scott, Chief Executive Officer of SciDev Limited, said:

“Securing our first revenue-generating contracts in the data centre market is an important early step in validating SciDev’s strategy to build a differentiated position in this emerging sector.

Data centres are becoming increasingly important users of water and are facing growing pressure to improve water efficiency and reduce reliance on potable supply. SciDev’s capability is well aligned to that challenge, combining specialist water treatment engineering, modular technology, and practical project delivery experience.

These initial contracts are strategically important, providing early reference work with leading data centre operators and developers, demonstrating the relevance of our technical capability, and creating a platform from which we can pursue larger opportunities over time.

This is another tangible example of our strategy to build an integrated water solutions platform that combines engineering, chemistry, data and optimisation, focused on the markets where SciDev has a clear right to win, including Mining, Energy and Data Centres.”
