

SRJ Receives Further Middle East Inspection Service Orders

Highlights:

- Two additional purchase orders received for inspection services with AD Ports Group via its subsidiary Divetech Marine Engineering Services
- Awards demonstrate continued conversion of framework agreements and customer engagements into operational work.
- Company continues to see a growing pipeline of opportunities across maritime, energy and infrastructure sectors.
- Geopolitical uncertainty remains a risk to mobilisation timing and project execution.

SRJ Technologies Group Plc (ASX: SRJ) ("SRJ" or the "Company") is pleased to advise that it has received two additional purchase orders for inspection services in the Middle East through its subsidiary Air Control Entech Survey LLC ("ACE") with AD Ports Group under the existing framework contract with its subsidiary, Divetech Marine Engineering Services.

While the individual values of the purchase orders are not considered material, the Company believes the awards are strategically significant as they represent continued conversion of customer engagements and framework arrangements into active operational work in the region. The inspection scopes are expected to utilise the Company's robotic inspection capabilities and build upon the momentum outlined in the Company's operational update released on 9 July 2026, which highlighted the recommencement of regional activity following the easing of airspace restrictions across the UAE.

Management views these orders as a positive indicator of customer confidence in the Company's technology offering and service delivery capability. Importantly, the awards provide further evidence that the Company's Middle East pipeline is progressing from business development and qualification activities into recurring field operations.

The Company continues to pursue additional opportunities across the region and expects further work scopes and call-offs may arise under existing customer relationships and framework agreements.

Outlook

The Middle East remains a strategically important market for SRJ, with the Company focused on expanding recurring inspection, integrity and asset management services across maritime, energy and critical infrastructure sectors.

Notwithstanding the positive increase in activity levels, geopolitical tensions in the broader region have heightened again in recent weeks. While customer engagement remains strong and operational capability is available for deployment, the Company notes that regional security developments, regulatory actions or client scheduling decisions may continue to impact the timing of mobilisation and execution of awarded work scopes.

The Company will continue to update shareholders as additional material developments occur.

ABOUT SRJ TECHNOLOGIES

SRJ delivers integrated asset integrity maintenance, engineering and technology-enabled services to the energy, industrial and maritime industries. Asset integrity maintenance involves the provision of embedded site-based maintenance, advanced inspection, predictive monitoring and repair solutions designed to prevent asset failures and extend asset life. The services are focused on maintaining and assuring the integrity of critical mechanical and pressure containment systems, supporting safe, reliable and compliant operations across operating facilities. SRJ's asset integrity and maintenance services support asset owners in the development, implementation and execution of long-term lifecycle integrity strategies, including regulatory compliance requirements applicable to critical mechanical and pressure containment systems.

Remote inspection services are provided utilising advanced robotics and custom UAV technologies. SRJ's range of containment management solutions enable customers to assure the integrity of new and ageing assets subject to ever more demanding regulatory pressures.

By providing advanced robotic and UAV systems, ACE (an SRJ Group company) is revolutionising asset inspection in terms of minimising human risk and providing accurate and repeatable inspection data. ACE can inspect the previously un-inspectable, delivering asset integrity assurance and management to the Energy and Marine industries. ACE has achieved accreditation with all the major Marine Class Societies.

SRJ's range of asset integrity products and solutions have gained industry approval across the energy sector and are now in use across the world. SRJ's products are designed to maintain and assure the integrity of pressure containment systems and therefore play an important role in the overall integrity of operating facilities.
