

High Resolution SAM Geophysical Survey over Beatty Park Sth Gold Prospect

SUMMARY

- Sub audio magnetic (SAM) geophysical survey over Beatty Park Sth scheduled to commence next week.
- The survey will provide detailed information on the key structural elements and potential mineralised zones underlying the Beatty Park gold discovery and the wider area.
- Integration of the geophysical data with Tambourah's drill hole and geochemistry datasets will generate bedrock targets for planned RC drilling.

Tambourah Metals Ltd (ASX:TMB) has commissioned a high-resolution Sub-Audio-Magnetic (SAM) geophysical survey over the Beatty Park Sth gold discovery. The SAM survey will replace 1990's era aeromagnetic data and provide high-quality geophysical data that will enhance target definition below the weathered zone.

The SAM survey generates integrated Total Magnetic Intensity (TMI) and Magnetometric Conductivity (MMC) datasets over a 2km by 1km area surrounding the Beatty Park Sth high-grade gold mineralisation¹ (see Figure 1) to map lithological variations and structural-alteration zones. The method can provide high spatial resolution and depth penetration, enabling detection of buried shear zones, alteration haloes and sulphide accumulations that are potential sources of the high-grade gold intersected in aircore drilling.

The SAM survey will extend beyond the area of historic and current drilling into untested areas and is expected to provide new high resolution data to generate bedrock gold targets within this underexplored area of the Bryah Basin.

¹ See Tambourah's ASX announcements dated 4th August 2025 and 13th October 2025.

About Tambourah Metals

Tambourah Metals is a West Australian exploration company established in 2020 to develop gold and critical mineral projects. Tambourah is exploring for Gold and Critical Minerals at the Tambourah, Shaw River and Speewah Nth projects and Gold at the Bryah project in the Murchison region. Since listing the Company has extended the portfolio to include additional critical mineral projects in the Pilbara and gold projects in the Bryah, acquiring strategic positions in districts with known endowment and production.

Forward Looking Statements

Certain statements in this document are or may be “forward-looking statements” and represent Tambourah’s intentions, projections, expectations, or beliefs concerning among other things, future exploration activities. The projections, estimates and beliefs contained in such forward-looking statements don’t necessarily involve known and unknown risks, uncertainties, and other factors, many of which are beyond the control of Tambourah Metals, and which may cause Tambourah Metals actual performance in future periods to differ materially from any express or implied estimates or projections. Nothing in this document is a promise or representation as to the future. Statements or assumptions in this document as to future matters may prove to be incorrect and differences may be material. Tambourah Metals does not make any representation or warranty as to the accuracy of such statements or assumptions.

The references in this announcement to Exploration Results were reported in accordance with Listing Rule 5.7 in the following announcements:

- *“High-Grade Gold up to 126g/t at Beatty Park Sth”. 4th August 2025*
- *“Exceptional Gold Results from Re-sampling at Beatty Park Sth”. 13th October 2025*

The Company confirms it is not aware of any new information or data that materially affects the information in the original reports and that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original reports.

Competent Person’s Statement

The information in this report that relates to Exploration Results is based on information compiled by Mr. Bill Clayton, Geology Manager and a shareholder and Director of the Company, who is a Member of the Australian Institute of Geoscientists. Mr. Bill Clayton has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr. Clayton consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
