10 August 2026

RC Drilling commences at Beatty Park South

Tambourah Metals Ltd (ASX:TMB) is pleased to advise that an RC drill rig has commenced a 10-hole drilling program at the Beatty Park Sth gold prospect, 160km north of Meekatharra in Western Australia (see Figure 2). The program follows 2025 aircore drilling that intersected very high-grade shallow gold on two adjacent drill traverses in altered ultramafics, including:

- ***6m at 25.8g/t Au from 30m, including 1m at 126g/t Au from 30m in BPAC016 and***
- ***10m at 38.9g/t Au from 22m, including 1m at 169g/t Au from 25m in BPAC028***[1]

The RC drilling program includes five RC precollars for EIS co-funded diamond drilling, which will target depth and strike extensions to the high-grade gold mineralisation. The diamond drilling is designed to test below the Beatty Park mineralisation to a vertical depth of approximately 250m.

Five exploration RC holes, each planned to a depth of 150m, will test targets identified from multi-element geochemistry and the SAM (sub-audio magnetic) geophysical survey completed over the Beatty Park gold anomaly. The holes will target potential blind mineralisation associated with interpreted structures and hydrothermal fluid pathways.

Following completion of drilling at Beatty Park Sth, the drill rig will relocate to Baxter Sth, 4km south of the Harmony gold mine, to test a high-grade gold anomaly reported from historic drilling:

- ***8m at 5.5g/t Au from 67m, including 2m at 11.8g/t Au from 67m and 1m at 13.1g/t Au from 72m in PHRC0977***[2] *reported from Ravelstone Formation sediments*

The RC drilling will test the historic mineralised intersection and seek to intersect the northwest-plunging Ravelstone–Narracoota contact, which hosts the Harmony gold deposit 4km to the north.

The ~1,000m program of EIS co-funded diamond drilling is scheduled to commence shortly after completion of RC drilling in mid-late August.

About Tambourah Metals

Tambourah Metals is a West Australian exploration company established in 2020 to develop gold and critical mineral projects. Tambourah is exploring for Critical Minerals at the Eleys, Coondina, Kurrana and Speewah Nth projects and Gold at the Tambourah (Pilbara) Bryah projects (Murchison). Since listing the Company has expanded the portfolio to include additional critical mineral projects in the Pilbara and under explored gold projects in the Bryah, acquiring strategic positions in districts with known endowment and production.

Forward Looking Statements

Certain statements in this document are or may be “forward-looking statements” and represent Tambourah’s intentions, projections, expectations, or beliefs concerning among other things, future exploration activities. The projections, estimates and beliefs contained in such forward-looking statements don’t necessarily involve known and unknown risks, uncertainties, and other factors, many of which are beyond the control of Tambourah Metals, and which may cause Tambourah Metals actual performance in future periods to differ materially from any express or implied estimates or projections. Nothing in this document is a promise or representation as to the future. Statements or assumptions in this document as to future matters may prove to be incorrect and differences may be material. Tambourah Metals does not make any representation or warranty as to the accuracy of such statements or assumptions.

The references in this announcement to Exploration Results were reported in accordance with Listing Rule 5.7 in the following announcements:

- “High grade gold targets identified at Bryah Project” 20th June 2024.
- “High Grade Gold up to 126g/t Au at Beatty Park Sth” 4th August 2025.
- “Exceptional Gold Results from Re-sampling Beatty Park Sth” 13th October 2025.

The Company confirms it is not aware of any new information or data that materially affects the information in the original reports and that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original reports.

Competent Person’s Statement

The information in this report that relates to Exploration Results is based on information compiled by Mr. Bill Clayton, Geology Manager and a shareholder and Director of the Company, who is a Member of the Australian Institute of Geoscientists. Mr. Bill Clayton has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr. Clayton consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
