In November 2025 Xpedra acquired a 100% interest in the Springfield Gold Deposit in central NSW.

Historical shallow drilling and mapping has delineated a well-mineralised intrusion extending over >1,700m of strike. Very limited drilling has been undertaken previously (only 6,568m), yet considerable shallow, thick, and high-grade mineralisation has been intersected, including:

Drilling to test below shallow mineralisation has been constrained to only 500m of the >1,700m strike length of the mineralised intrusion, with mineralisation remaining completely open in both directions along strike and at depth. There has been no drilling completed at the project since 1999.
